Call Centers and the Global Division of Labor Andrew J.R. Stevens, 2014-03-26 Call centers have come in the last three decades to define the interaction between corporations governments and other institutions and their respective customers citizens and members The offshoring and outsourcing of call center employment part of the larger information technology and information technology enabled services sectors continues to be a growing practice amongst governments and corporations in their attempts at controlling costs and providing new services While incredible advances in technology have permitted the use of distant and offshore labor forces the grander reshaping of an international political economy of communications has allowed for the acceleration of these processes New and established labor unions have responded to these changes in the global regimes of work by seeking to organize call center workers These efforts have been assisted by a range of forces not least of which is the condition of work itself but also attempts by global union federations to build a bridge between international unionism and local organizing campaigns in the Global South and Global North Through an examination of trade union interventions in the call center industries located in Canada and India this book contributes to research on post industrial employment by using political economy as a juncture between development studies the sociology of work and labor studies

The Climate-Health-Sustainability Nexus Pardeep Singh, Neha Yadav, 2024-04-30 In a compelling scholarly journey this book unfolds the intricate narratives of human progress and its environmental repercussions catalyzed by the Industrial Revolution It thoughtfully contrasts the exploitative environmental ideologies stemming from colonization and industrialization against the profound yet often marginalized indigenous ecological philosophies urging a pivotal shift in environmental stewardship The narrative meticulously traces the arc of scientific discovery and environmental policy evolution from Eunice Foote's groundbreaking hypothesis on the greenhouse effect to the landmark achievements of the Paris Agreement encapsulating over a century of environmental activism and scholarly debate The discourse extends beyond traditional environmental concerns exploring the intersection of climate change with public health food security and gender disparities underscoring the urgency of sustainable agricultural practices and the pivotal role of women in food systems It introduces the transformative potential of digital health innovations and

renewable energy technologies as crucial tools in climate mitigation highlighting the need for an integrated socio technical governance model that includes community resilience and biopsychosocial health The book critically addresses the dynamics of climate finance advocating for inclusive green growth through strategic renewable energy investments and revisits the Tragedy of the Commons to challenge conventional views on communal resource management It advocates for a justice oriented approach to tackling the multifaceted environmental social and economic challenges with a particular lens on the adverse impacts borne by marginalized communities in the Global South Furthermore it explores the untapped potential of wild genetic resources in bolstering food security It aligns with the United Nations Sustainable Development Goals advocating for integrating Indigenous wisdom into urban development strategies This book is a call to action serving as a comprehensive scholarly examination that addresses the multifaceted challenges of climate change health and sustainability and champions a collective approach towards forging a sustainable and equitable future
