General Safety Instructions for All Tools

1. **READ** ALL instructions and understand all warnings. Failure to follow all instructions listed below may result in electric shock, fire and/or serious personal injury.

SAVE THESE INSTRUCTIONS

- **KEEP WORK AREA CLEAN.** Cluttered areas and benches invite injuries.
- **CONSIDER WORK AREA ENVIRONMENT.** Don't expose power tools to rain. Don't use power tools in damp or wet locations. Keep work area well lit.
- **GROUND/GROUNDING ELECTRICAL SHOCK.** Avoid body contact with grounded surfaces; for example, pipes, radiators, ranges, and refrigerator enclosures.
- **KEEP CHILDREN AWAY.** All visitors should be kept away from work area. Do not let visitors contact tool or extension cord.
- **STORE TOOL PROPERLY.** When not in use, tools should be stored in dry, and high or locked-up place — out of reach of children.
- **DON'T FORCE A TOOL.** It will do the job better and safer at the rate for which it was intended.
- **USE RIGHT TOOL.** Don't force small tool or attachment to do the job of a heavy duty tool. Don't use tool for purpose not intended. For example, don't use circular saw for cutting fine limbo or logs.
- **DRESS PROPERLY.** Do not wear loose clothing or jewelry. Contain long hair. Keep your hair, clothing, and gloves away from moving parts. Loose clothing, jewelry, or long hair can be caught in moving parts. Air vents often cover moving parts and should never be blocked.
- **USE SAFETY GLASSES.** Also use face or dust mask if operation is dusty.
- **DON'T ABUSE CORDS.** Never carry any tool by cord or yank it to disconnect from receptacle. Keep cord from heat, oil, and sharp edges.
- **SECURE WORK.** Use clamps or a vise to hold work. It's safer than using your hand and it frees both hands to operate tool.
- **DON'T OVERREACH.** Keep proper footing and balance at all times.
- **MAINTAIN TOOLS WITH CARE.** Keep tools sharp and clean for better and safe performance. Follow instructions for lubricating and changing accessories. Inspect tool cords periodically and if damaged have repaired by authorized service facility. Inspect extension cords periodically and if damaged have repaired by authorized service facility. Inspect extension cords periodically and if damaged have repaired by authorized service facility. Inspect extension cords periodically and if damaged have repaired by authorized service facility.
- **DISCONNECT OR LOCK OFF TOOLS** when not in use, before servicing, and when changing accessories, such as blades, bits, cutters.
- **REMOVE ADJUSTING KEYS AND WRENCHES.** Form habit of checking to see that keys and adjusting wrenches are removed from tool before turning it on.
- **AVOID SHOCKING. BE CAREFUL.** Don't carry plugged-in tool with finger on the switch. Be sure the switch is off when plugging in.
- **OUTDOOR USE EXTENSION CORDS.** When tool is used outdoors, use only extension cords intended for use outdoors and so marked.
- **STAY ALERT.** Watch what you are doing. Use common sense. Do not operate tool when you are tired.
- **CHECK DAMAGED PARTS.** Before further use of the tool, a guard or other part that is damaged should be carefully checked to determine that it will operate properly and perform its intended function. Check for alignment of moving parts, bending of moving parts, breakage of parts, mounting, and any other conditions that may affect its operation. A guard or other part that is defective should be properly repaired or replaced by an authorized service center unless otherwise instructed elsewhere in this instruction manual. Never defective switches replaced by authorized service center. Do not use tool if switch does not turn it on and off.
- **DO NOT OPERATE** portable electric tools near flammable liquids or in gaseous or explosive atmospheres. Motors in these tools normally spark, and the sparks might ignite fumes.

Additional Safety Rules for Routers

- **KEEP HANDS AWAY** from cutting area. Never reach under the material for any reason.

- **HOLD FRONT OF TOOL** by grasping the contained gripping areas. Do not insert fingers or thumb into the vicinity of the cutter head. Keep the router base firmly in contact with the work when cutting. Do not change the router bit while the router is running.
- **USE SHARP CUTTERS.** Dull cutters may cause the router to weave or stall under pressure.
- **Never touch the bit immediately after use.** It may be extremely hot.
- **Be sure that the motor has stopped completely before you lay the router down.** If the cutter head is still spinning when the tool is laid down, it could cause injury or damage.
- **Be sure that the router bit is clear of the workpiece before starting motor.** If the bit is in contact with the workpiece when the motor starts it could make the router jump, causing damage or injury.

5. **CAUTION:** Wear appropriate personal hearing protection during use. Under some conditions and duration of use, noise from this product may contribute to hearing loss.

5. **WARNING:** Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- lead from lead-based paints,
- crystalline silica from bricks and cement and other masonry products, and
- arsenic and chromium from chemically-treated lumber (CCA).

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals, work in a well ventilated area, and wear with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

- **Avoid prolonged contact with dust from power sanding, sawing, grinding, drilling, and other construction activities.** Wear protective clothing and wash exposed areas with soap and water. Allowing dust to get into your mouth, eyes, or lay on the skin may promote absorption of harmful chemicals.

SAVE THESE INSTRUCTIONS FOR FUTURE USE

Grounding

This tool should be grounded while in use to protect the operator from electric shock. The tool is equipped with an approved three-conductor cord and three-prong grounding type plug to fit the proper grounding type receptacle. The green (or green and yellow) wire in the cord is the grounding wire. Never connect the green (or green and yellow) wire to a live terminal. If your unit is intended for use on less than 150 volts, it has a plug similar to that shown in Figure A. An adapter, Figures B and C, is available for connecting Figure A plugs to two-prong receptacles. The green-colored rigid rod, lug, etc., must be connected to a permanent ground such as a properly grounded outlet box. Whenever the adapter is used, it must be held in place by a metal screw.

NOTE: The 220 volt plug and plug outlet are different from those shown in Figures B and C.

5. **WARNING:** Improper connection of the equipment grounding conductor can result in the risk of electric shock. Check with a qualified electrician or service person if you are in doubt as to whether the outlet is properly grounded. Do not modify the plug provided with the appliance. It will not fit the outlet. A proper outlet must be installed by a qualified electrician. We recommend that you never disassemble the tool or try to do any rewiring in the electrical system. Any repairs should be performed only by authorized service centers. Should you be determined to make a repair yourself, remember that the green colored wire is the grounding wire. Never connect this green wire to a live terminal. If you replace the plug on the power cord, be sure to connect the green wire only to the grounding (longest) prong of a three-prong plug. Never remove the grounding prong.

Extension Cords

Double insulated tools have 2-wire cords and can be used with 2-wire or 3-wire extension cords. Only round jacketed extension cords should be used, and we recommend that they be listed by Underwriters Laboratories (UL). If the extension will be used outside, the cord must be suitable for outdoor use. Any cord marked as outdoor can be used for indoor work. The letters "W" or "EW" on the cord jacket indicate that the cord is suitable for outdoor use.

An extension cord must have adequate wire size (AWG or American Wire Gauge) for safety, and to prevent loss of power and overheating. The smaller the gauge number of the wire, the greater the capacity of the cable, that is, 10 gauge has more capacity than 16 gauge. When using more than one extension to make up the total length, be sure each individual extension contains at least the minimum wire size.

To determine the minimum wire size required, refer to the extension cord chart.

Volts AC/100V	Amps Rating	Minimum Gauge for Cord Sets	
		Total Length of Cord in Feet	Minimum Gauge for Cord in Feet
0-25	0-25	25-100	16-18
0-50	0-50	101-200	14-16
More Than	More Than	201-300	12-14

Before using an extension cord, inspect it for loose or exposed wires, damaged insulation, and defective fittings. Make any needed repairs or replace the cord if necessary.

Collet

IMPORTANT NOTE: NEVER TIGHTEN COLLET NUT IF THERE IS NO CUTTER IN THE COLLET. COMPRESSIONING COLLET TOO MUCH MIGHT RESULT IN DAMAGE. A 1/2" collet is installed in your router and a 1/4" collet is included in the package.

To Change Collet

Unplug the router. Using the supplied wrenches as necessary, simply unscrew and remove the collet nut. Pull the collet out of the end of the shaft.

Installing Router Bits

TURN OFF AND UNPLUG ROUTER.

To install a router bit, first open the collet by loosening (counterclockwise) the collet nut. Use the supplied wrenches if necessary. Insert the shaft of the desired bit into the collet as far as it will go and then pull it out about 1/16" (1.6 mm). Hold the router shaft with one of the wrenches and firmly tighten the collet nut with the other.

5. **CAUTION:** Router Bits Are Sharp. Use Care in Handling Them.

Depth Adjustment

TURN OFF AND UNPLUG ROUTER.

Follow the steps below to adjust router cutting depth.

1. Turn off the router and unplug the cord.
2. Select and install the desired bit.
3. Place the router down on its base on your work piece.
4. Loosen the wing nut (A) on the depth adjuster and turn the depth adjusting knob (B), shown in Figure 2, to raise or lower the bit until it just touches the work piece.
5. Rotate the black calibrated knob (A) to align the "0" mark with the notch (B) in the housing, as shown in Figure 2.
6. Turn the router upside down and put it on the work piece.
