## Exercise 1: Single Well Coning Model

### Purpose

- To acquaint the user with editing ECLIPSE data files
- To acquaint the user with the PRT file for identifying errors
- To compare several simulation models in ECLIPSE Office

### Data

This is a radial model of a single oil production well. The reservoir contains oil and free and dissolved gas; there is an initial gas cap. In the course of production the well initially produces only oil but eventually cones gas.

Four different models of the case are presented RAD04.DATA, RAD08.DATA, RAD16.DATA and RAD24.DATA. RAD.GRF is a graphics run file you will need at a later stage of this exercise. RAD04 is a complete data set; do not alter it. Each of the others contains a different error in the RUNSPEC section. The errors need to be identified and corrected before the models can be run and the results compared. Do not alter any sections of the data file except RUNSPEC i.e. do not change anything after the GRID keyword.

### Process

#### Run the simulations

1. Obtain data files. Your course tutor will provide the files you need. Copy them all from the course directory to a convenient location in a sub-directory of your home directory.
