Key Concepts:

- The biological influences on organisms are called biotic factors. The physical components of an ecosystem are called abiotic factors.
- Primary producers are the first producers of energy-rich compounds that are later used by other organisms. Organisms that rely on other organisms for energy and nutrients are called consumers.
- Energy flows through an ecosystem in a one-way stream, from primary producers to various consumers. Pyramids of energy show the relative amount of energy available at each trophic level of a food chain or food web. A pyramid of biomass illustrates the relative amount of living organic matter available at each trophic level of an ecosystem. A pyramid of numbers shows the relative number of organisms at each trophic level in an ecosystem.
- Unlike the one-way flow of energy, matter is recycled within and between ecosystems. Water continuously flows between the oceans, the atmosphere, and land – sometimes outside organisms and sometimes inside organisms. Every organism needs nutrients to build tissues and carry out life functions. Like water, nutrients pass through organisms and the environment through biogeochemical cycles. The carbon, nitrogen, and phosphorus cycles are particularly important for life.
- A region's climate is defined by year-after-year patterns of temperature and precipitation. Global climate is shaped by many factors, including solar energy trapped in the biosphere, latitude, and the transport of heat by winds and ocean currents.
- A niche is the range of physical and biological conditions in which a species lives and the way the species obtains what it needs to survive and reproduce.
- By causing species to divide resources, competition helps determine the number and kinds of species in a community and determine the number and kinds of species in a community and the niche each species occupies.
- Predators can affect the size of prey populations in a community and determine the places prey can live and feed. Herbivores can affect both the size and distribution of plant populations in a community and can determine the places certain plants can survive and grow.
- Biologists recognize three main classes of symbiotic relationships in nature: mutualism, parasitism, and commensalism.
- Ecosystems change over time, especially after disturbances, as some species die out and new species move in. Secondary succession in healthy ecosystems following natural disturbances often reproduces the original climax community. Ecosystems may or may not recover from human disturbances.
- Biomes are described in terms of abiotic factors like climate and soil type, and biotic factors like plant and animal life.
- Ecologists typically divide the ocean into zones based on depth and distance from shore.
- The factors that can affect population size are the birthrate, the death rate, and the rate at which individuals enter or leave the population.

Species Problems and Beyond John S. Wilkins, Frank E. Zachos, Igor Ya. Pavlinov, 2022-06-14 *Species Problems and Beyond* offers a collection of up to date essays discussing from an interdisciplinary perspective the many ramifications of the Species Problem. The authors represent experts in the philosophy of biology in species level evolutionary investigations and in biodiversity studies and conservation. Some of the topics addressed concern the context sensitivity of the term species, species as individuals, processes, natural kinds, or as operative concepts, species delimitation in the age of Big genomic Data and taxonomic inflation and its consequences for conservation strategies. The carefully edited volume will be an invaluable resource for philosophers of biology and evolutionary biologists alike. Olivier Rieppel, Rowe Family Curator of Evolutionary Biology, Negaunee Integrative Research Center, Field Museum, USA. *Species or the Species Problem* is a topic in science, in the philosophy of science, and in general philosophy. In fact, it encompasses many aspects of the same problem, and these are dealt with in this volume. Species are often thought of as fundamental units of biological matter to be used in ecology, conservation, classification, and biodiversity. The chapters in this book present opposing views on the current philosophical and conceptual issues of the Species Problem in biology. Divided into four sections: Concepts and Theories, Practice and Methods, Ranks and Trees, and Names and Metaphysics and Epistemologies, the book is authored by biologists, philosophers, and historians, many leaders in their fields. Topics include ontology of species, definitions of both species category and units, species rank, speciation, issues, nomenclature, ecology, and species conservation. *Species Problems and Beyond* aims to clarify the contemporary issues of the Species Problem. It is ideal for use in upper level seminars and courses in Evolutionary Biology, Philosophy of Science, Philosophy of Biology, Systematics and Taxonomy, and Phylogenetics, Cladistics, and for any scholar in these fields.

Sustaining TEL: From Innovation to Learning and Practice Martin Wolpers, Paul A. Kirschner, Maren Scheffel, Stefanie Lindstaedt, Vania Dimitrova, 2010-09-15 These proceedings of the 5th European Conference on Technology Enhanced Learning (EC TEL 2010) exemplify the highly relevant and successful research being done in TEL. Because of this great work, this year's conference focused on Sustaining TEL: From Innovation to Learning and Practice. The last decade has seen significant investment in terms of effort and resources, i.e. time, people, and money, in innovating education and training. The time has come to make the bold step from small scale innovation research and development to large scale and sustainable implementation and evaluation. It is time to show the world, i.e. government, industry, and the general population, that our field has matured to the stage that sustainable learning and learning practices both in schools and in industry can be achieved based upon our work. The present day TEL community now faces new research questions related to large scale deployment of technology enhanced learning, supporting individual learning environments through mashups and social software, new approaches in TEL certification, and so forth. Furthermore, new approaches are required for the design, implementation, and use of TEL to improve the understanding and communication of educational desires and the needs of all stakeholders ranging

from researchers to learners tutors educational organizations companies the TEL industry and policy makers And the TEL community has taken up this challenge As one can see in this volume in its fth year the conference was once more able to assemble the most prominent and relevant research results in the TEL area The conference generated more than 150 submissions which demonstrates a very lively interest in the conference theme thus significantly contributing to the conference's success
