Recently it has become apparent that public authorities must take a pro active role to define the rules of the newly emerged markets before potential issues and concerns cement. How rules are currently written determines who will exert a stronger influence on the economy and society in the coming years. This is key reason why digital policymakers are currently exposed to tremendous pressure by stakeholders. This book takes a journey through all the main areas in the digital economy that beg for policy action. Readers may learn about the general features of a digital economy and the EU long term strategic plans to govern it. They may learn about telecom markets, the data economy, the digitization of the public sector, cybersecurity, the platform economy, liability for online content, e commerce, the sharing economy, the impact of technology on labour markets, digital inequality, disinformation and artificial intelligence. This book primarily aims to provide students with the background knowledge and analytical tools necessary to understand, analyse and assess the impact of EU digital policies on the European economy and society. The approach is both theoretical and applied. The main goal is to prepare students to give informed and economically sound advice to an EU policymaker for digital affairs. **Economics** Gary E. Deficit Hysteria Arthur Benavie, 1998-09-30 The political consensus in the United States today is that the nation must avoid deficit spending But as virtuous and unassailable as that goal sounds it has fallacies and dangers In a lucid nontechnical writing style Benavie shows that deficits can be either good or bad and explains how to tell the difference Deficits or government borrowing can be beneficial to the nation s economic health he shows in three main ways When the economy slumps a deficit is automatically created and helps to reduce the severity of the recession When the economy is seriously depressed boosting the deficit may be the only cure and deficits supporting such investments as basic research cleaning up toxic waste and rebuilding inner cities are crucial to the economic health of future generations Preventing such borrowing would be comparable to preventing one s family from borrowing money to buy a house or to put a child through college
