Medicine MATLAB enables quantitative analysis and the visualization of nuclear medical images of several modalities such as Single Photon Emission Computed Tomography SPECT Positron Emission Tomography PET or a hybrid system where a Computed Tomography system is incorporated into a SPECT or PET system or similarly a Magnetic Resonance Imaging system MRI into a SPECT or PET system Through a high performance interactive software MATLAB also allows matrix computation simulation quantitative analysis image processing and algorithm implementation MATLAB can provide medical physicists with the necessary tools for analyzing and visualizing medical images It is useful in creating imaging algorithms for diagnostic and therapeutic purposes solving problems of image reconstruction processing and calculating absorbed doses with accuracy An important feature of this application of MATLAB is that the results are completely reliable and are not dependent on any specific cameras and workstations The use of MATLAB algorithms can greatly assist in the exploration of the anatomy and functions of the human body offering accurate and precise results in Nuclear Medicine studies
