Establishing residue supply chains to reduce open burning - The case of rice straw and renewable energy in Punjab, India Food and Agriculture Organization of the United Nations,2022-06-03 Open burning of crop residues in India is a serious issue that not only impacts human health but is also detrimental to soil health in the long term According to the estimates from the Ministry of New and Renewable Energy about 500 million tonnes of crop residues are generated annually While a portion of these residues is used for various purposes a larger portion is burnt in the fields The problem seems to be specifically severe in Punjab where a large quantity of rice straw is burnt after harvesting rice to prepare the field quickly and cheaply for wheat cultivation It is in this background that the project aimed to support the local government in Punjab and the national government of India to use rice straw productively and avoid open burning Rice straw is a useful resource that can be used in situ to maintain soil fertility as well as ex situ to produce value added products including energy However a key challenge in using crop residues including rice straw is to mobilize it in systematically This report presents a model crop residue value chain that can support the collection transport storage of rice straw which can enable productive uses of rice straw Moreover it estimates the quantity of rice straw produced in each district in Punjab and further estimates the investment needed in developing a crop residue supply chain in the state Finally it also undertakes a techno economic assessment of energy technologies to identify the most profitable way to use rice straw to produce sustainable energy *The Central Law Journal* ,1887 Vols 65 96 include Central law journal s international law list **United States Government Publications Monthly Catalog** ,1946 **Service Chemistry** Vivian Byam Lewes,John Samuel Stafford Brame,1920 **The EBay Price Guide** Julia L.
