Conceptual Physics Hewitt 35:

Unbelievable Michael Newton Keas, 2019-01-08 Unbelievable explodes seven of the most popular and pernicious myths about science and religion Michael Newton Keas a historian of science lays out the facts to show how far the conventional wisdom departs from reality He also shows how these myths have proliferated over the past four centuries and exert so much influence today infiltrating science textbooks and popular culture The seven myths Keas shows amount to little more than religion bashing especially Christianity bashing Unbelievable reveals Why the Dark Ages never happened Why we didn't need Christopher Columbus to prove the earth was round Why Copernicus would be shocked to learn that he supposedly demoted humans from the center of the universe What everyone gets wrong about Galileo's clash with the Church and why it matters today Why the vastness of the universe does not deal a blow to religious belief in human significance How the popular account of Giordano Bruno as a martyr for science ignores the fact that he was executed for theological reasons not scientific ones How a new myth is being positioned to replace religion a futuristic myth that sounds scientific but isn't In debunking these myths Keas shows that the real history is much more interesting than the common narrative of religion at war with science This accessible and entertaining book offers an invaluable resource to students scholars teachers homeschoolers and religious believers tired of being portrayed as anti intellectual and anti science

Islands in Geography, Law, and Literature Chiara Battisti, Sidia Fiorato, Matteo Nicolini, Thomas Perrin, 2022-04-04 This collection explores the heterogeneous places we have traditionally been taught to term islands It stages a conversation on the very idea of islandness thus contributing to a new field of research at the crossroads of law geography literature urban planning politics arts and cultural studies The contributions to this volume discuss the notion of islandness as a device triggering the imagination triggering narratives and representations in different creative fields they explore the interactions between legal socio political and fictional approaches to remoteness and the state of insularity policy responses to both remoteness and boundaries on different scales and the insular legal framing of geographical remoteness The product of a cross disciplinary exchange on islands this edited volume will be of great interest to those working in the fields of Island Studies as well as literary studies scholars geographers and legal scholars

Waves: A Very Short Introduction Mike Goldsmith, 2018-11-15 We live in a world of waves

The Earth shakes to its foundations the seas and oceans tremble incessantly sounds reverberate through land sea and air Beneath the skin our brains and bodies are awash with waves of their own and the Universe is filled by a vast spectrum of electromagnetic radiation of which visible light is the narrowest sliver Casting the net even wider there are mechanical waves quantum wave phenomena and the now clearly detected gravitational waves Look closer and deeper and more kinds of waves appear down to the most fundamental level of reality This Very Short Introduction looks at all the main kinds of wave their sources effects and uses Mike Goldsmith discusses how wave motion results in a range of phenomena from reflection diffraction interference and polarization in the case of light waves to beats and echoes for sound All waves however different share many of the same features and as Goldsmith shows for all their complexities many of their behaviours are fundamentally simple
