

Research conclusion example

Braille paved the way for dramatic cultural changes in the way blind people were treated and the opportunities available to them. Louis Braille's innovation was to reimagine existing reading systems from a blind perspective, and the success of this invention required sighted teachers to adapt to their students' reality instead of the other way around. In this sense, Braille helped drive broader social changes in the status of blindness. New accessibility tools provide practical advantages to those who need them, but they can also change the perspectives and attitudes of those who do not.
