Thorough treatment is given in one unified text to the following features: Correct market conventions for FX volatility surface construction; Adjustment for settlement and delayed delivery of options; Pricing of vanillas and barrier options under the volatility smile; Barrier bending for limiting barrier discontinuity risk near expiry; Industry strength partial differential equations in one and several spatial variables using finite differences on nonuniform grids; Fourier transform methods for pricing European options using characteristic functions; Stochastic and local volatility models and a mixed stochastic local volatility model; Three factor long dated FX model; Numerical calibration techniques for all the models in this work; The augmented state variable approach for pricing strongly path dependent options using either partial differential
