

Power windows

The windows can be operated with the switch on each side door.

The power windows work when the ignition switch is in the "ON" position.

Key off operation: If the driver's door is closed, they work for 45 seconds even after the ignition switch is turned off. They stop working when the driver's door is opened.

OPERATING THE DRIVER'S WINDOW

Use the switch on the driver's door.

Normal operation: The window moves as long as you hold the switch.

To open: Lightly push down the switch.

To close: Lightly pull up the switch.

Automatic operation: Push the switch completely down or pull it completely up, and then release it. The window will fully open or close. To stop the window part-way, lightly move the switch in the opposite direction and then release it.

Jam protection function: During automatic closing operation, the window stops and opens half way if something gets caught between the window and window frame.

If an impact is given to the window, this function may work without anything caught.

CAUTION

- Never try jamming any part of your body to make the jam protection function work intentionally.
- The jam protection function may not work when something gets caught just before the window is fully closed.
