Designing For Hope Pathways To Regenerative Sustainability:

Designing for Hope Dominique Hes, Chrisna du Plessis, 2014-10-17 A forward looking book on sustainable design that describes problems and then by providing a different way to conceptualise design and development leads on to examples of regenerative solutions Its aim is to move the discussion away from doing less but still detracting from our ecological capital to positively contributing and adding to this capital This book offers a hopeful response to the often frightening changes and challenges we face arguing that we can actively create a positive and abundant future through mindful contributive engagement that is rooted in a living systems based worldview Concepts and practices such as Regenerative Development Biophilic Design Biomimicry Permaculture and Positive Development are explored through interviews and case studies from the built environment to try and answer questions such as How can projects focus on creating a positive ecological footprint and contribute to community How can we as practitioners restore and enrich the relationships in our projects and How does design focus hope and create a positive legacy

Building Sustainability with the Arts David Curtis, 2017-11-06 Environmental art or ecoart is a burgeoning field and includes a wide variety of practices some of which are exemplified in this collection from sculptures or installations made from discarded rubbish to intimate ephemeral artworks placed in the natural environment or from theatrical presentations incorporated into environmental education programs to socially critical paintings In some cases the artworks aim to create indignation in the viewer sometimes to educate sometimes to create a feeling of empathy for the natural environment or sometimes they are built into community building projects This timely book examines various roles of the arts in building ecological sustainability A wide range of practitioners is represented including visual and performing artists scientists social researchers environmental educators and research students They are all united in this text in their belief that the arts are vital in the building of sustainability in the way that they are practiced but also the connections they make to ecology science and indigenous culture

Southcombe, 2020-07-07 The notion of ecology has become central to contemporary design discourse This reflects contemporary concerns for our planet and a new understanding of the primary entanglement of the human species with the rest of the world The use of the term ecology with design tends to refer to how to integrate ecologies into design and cities and be understood in a biologically scientific and technical sense In practice this scientific technical knowledge tends to be only loosely employed The notion of ecology is also often used metaphorically in relation to the social use of space and cities This book argues that what it calls the biological and social senses of ecology are both important and require distinctly different types of knowledge and practice It proposes that science needs to be taken much more seriously in biological ecologies and that social ecologies can now be understood non metaphorically as assemblages Furthermore this book argues that design practice itself can be understood much more rigorously productively and relevantly if understood ecologically The plural term ecologies design refers to these three types of ecological design This book is unique in bringing these three perspectives on ecological design together in one place It is significant in proposing that a strong sense of ecologies design practice will only follow from the interconnection of these three types of practice Ecologies Design brings together leading international experts and relevant case studies in the form of edited research essays case studies and project work It provides an overarching critique of current ecologically oriented approaches and offers evidence and exploration of emerging and effective methods techniques and concepts It will be of great interest to academics professionals and students in the built environment disciplines **Environmental Science** George Tyler Miller, 1999 Open this book turn on your computer and get ready for an eye opening journey of discovery You ll be surprised at how fascinating the study of environmental science can be How heated the debate How interconnected the issues have become And how much you can learn from one very current and unbiased book This seventh edition of Miller s Environmental Science is both a learning experience and a gateway to the most current discoveries in the field today As you read you ll be encouraged to explore specific internet sites and online magazines to keep abreast of the latest research Along with your expanding knowledge you ll develop your own informed views about critical environmental issues **Regenerative Development and Design** Regensis

Regenerative-adaptive Design for Sustainable Development Phillip B. Roos, 2021 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that

incorporates the principles of regenerative design as well as an adaptive pattern language that re establishes our wholeness with nature and considers the vulnerabilities of a changing landscape The book examines an integral approach to contemporary theories of planning and design that explores the human nature relationship patterns in social and spatial interconnections between people and their natural environments The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia The concluding chapters argues that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these The book is intended for practitioners and academic scholars with interest in sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation

Sustainability Jason Montgomery, 2022-12-15 Global challenges instigated by climate change and urbanisation are driving research seeking appropriate and effective strategies for social economic and environmental sustainability While technical advancements are a major focus for sustainable development there are important research avenues that explore the relationship of place and sustainability from a number of perspectives Place based sustainability research identifies activities and initiatives that need to be layered and integrated with technological advances but also help drive them This research can facilitate the well considered steering of sustainable development and practices the essence of stewardship of place This volume of a wide range of research and design approaches by a diverse group of authors of various disciplines reveals new perspectives on the relationship of the culture of place and sustainability The central narrative that emerges from the chapters of this book is the critical cultural relationship of people to their environment both built and natural The authors delve into this relationship and see new approaches to support our awareness and appreciation of the nature of our cities and countryside as an integral ecosystem thereby having the potential to nurture social values and political will for increasing our sustainable practices and resilience The authors extend to us pathways for stewardship of our cities and countryside that are essential if we are to contend with the serious challenges provoked by our changing climate and the continuing urbanisation of the world s population **Thriving Beyond Sustainability** Andres R. The Design Pathway for Regenerating Earth Joe Brewer, 2021-04-15 Humanity is confronted with threats unprecedented in the history of our species There is an urgent need to describe the how for managing the convergent threats of ecological overshoot and civilization collapse This book offers a clear and cogent pathway for safeguarding humanity s future through an extended period of cascading consequences To a great extent the rest of our lives will be defined to a great extent by how those who understand our global predicament organize and cooperate with one other We are in the midst of a planetary change process

that extends far beyond a human lifetime Most of us experience a kind of intergenerational amnesia having never seen an intact ecosystem or a healthy human economy at any point in our lives How can we design our way through the struggles that now lie ahead We design by embracing the fundamental insight that all living systems self organize around the patterns of regeneration Applied to the scale of entire landscapes this reveals how all truly sustainable human cultures throughout history were organized at the territorial scale as bioregional economies A planet wide network of learning ecosystems is needed that can hold the complexity of birthing these regenerative bioregions during and after the rest of the collapse that we were all born into This book offers genuine hope There truly is a pathway to regenerate the Earth It is not to be found in the shallow optimism of techno fixes or consumer choices Nothing short of a spiritual revival of indigenous lifeways will do Combined with the best scientific knowledge about human behavior cultural evolution and the dynamic Earth a path can be made by walking it throughout the rest of this century and beyond
