Designing Geodatabases For Transportation:

Designing Geodatabases for Transportation J. Allison Butler, 2008 *Designing Geodatabases for Transportation* addresses the development of a GIS to manage data relating to the transportation facilities and service commonly organized around various modes of travel for accurate and reliable data exchange Transportation involves several modes of travel and although the details of each mode can be quite different this book demonstrates how all follow a basic conceptual structure That structure consists of an origin a destination a path between the two and a conveyance that provides the ability to move along the path to establish a common data structure *Choice*, 2008

, 2009 **GIS Static Storm Model Development** Francisco Olivera, Tarun Gill, 2004 Rainfall runoff modeling at a watershed scale requires the definition of the storm event and of the conveying characteristics of the watershed This research project focuses on the geographic definition of the storm event that is on the spatial distribution of precipitation over the watershed As the watershed size increases the likelihood that a storm will cover the entire watershed decreases and it becomes necessary to identify which parts of the watershed are affected by the storm and which are not Traditionally precipitation estimates have been based on precipitation records obtained at discrete points i e precipitation stations which led to depth duration frequency DDF equations or curves An estimate of the area covered by the storm event however has not been included in the analysis and it has been customary to assume it uniformly distributed over the entire watershed regardless of its size Thus far no model has been developed to map the area of the watershed that is covered by the storm as well as to determine the spatial distribution of precipitation over this area Use of NEXRAD precipitation data however will allow the development of a model and geographic information systems GIS based application that relaxes the assumption of uniformly distributed precipitation and estimates the storm precipitation distribution within the watershed **Children**
