web feb 26 2023 views 304 circular motion circular motion refers to the motion of an object along a circular path in circular motion the object moves at a constant speed around a fixed point or axis the direction of motion of the object is constantly changing but the speed remains the same

circular motion definition formula examples solved problems - Aug 15 2023

web circular motion is described as a movement of an object while rotating along a circular path circular motion can be either uniform or non uniform during uniform circular motion the angular rate of rotation and speed will be constant while during non uniform motion the rate of rotation keeps changing
