

Unit 8 Part 1: Viruses & Bacteria

Name _____

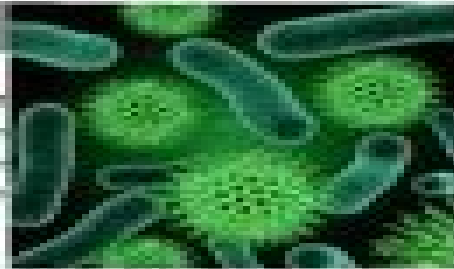

SECTION 1: Disease

A **disease** is an illness that keeps the body of an organism from working properly. They have many different origins, and some are more dangerous than others. Diseases come in two main classifications:

- **Non-infectious diseases** cannot be passed from one organism to another; they are not contagious. They can be genetic, or they can be caused by malnutrition or unclean living environments.
- **Infectious diseases** are caused by microscopic germs (such as bacteria or viruses) that invade the body and cause illness. Infectious diseases that can spread from person to person are said to be contagious.

Infectious diseases can spread to people from an animal or insect, but are not contagious from another human. Lyme disease is an example: You can't catch it from friends, family, or strangers. It is a bacteria passed from a tick to the animal it bites.

Contagious diseases (such as the flu, colds, or strep throat) spread from person to person in several ways. One way is through direct physical contact, like touching or kissing a person who has the infection. Another way is when an infectious microbe travels through the air after someone nearby sneezes or coughs. Sometimes people get contagious diseases by touching or using something an infected person has touched or used — like sharing a straw with someone who has mono or stepping into the shower after someone

who has athlete's foot. Sexually transmitted diseases can be spread through all variations of intercourse.

You can help protect yourself against contagious diseases by washing your hands frequently, making sure you've gotten all of your vaccines, and refraining from close physical contact with infected individuals.

Recall

1. An illness that keeps the body of an organism from working properly is called a _____.
2. What is the difference between infectious and non-infectious diseases?
3. In what 4 ways can you try to prevent yourself from contracting an infectious disease?

Comprehension

4. Identify one infectious disease, and explain how you know that it is infectious.
