Coverage of material applicable to the field is broad: a Fundamentals section on thermodynamics, fluid flow, heat transfer and psychrometrics; types of HVAC systems and components; comfort and air quality criteria; a Loads section on weather data processing, design heating and cooling loads; an Equipment section on air and water distribution systems, heating and cooling coils, cooling towers, refrigeration equipment; and a Design and Control section on seasonal energy use, control techniques, supervisory control, the HVAC design process and the rules of thumb often used in design. The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings. In addition, there is extensive supplemental on-line material that provides more in-depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers.
