

Backhoe Transport

To prepare the backhoe for job-to-job road travel:

1. Raise the boom to full height.
2. Retract the dipper completely.
3. Retract the bucket completely.
4. Raise the stabilizers to full height.
5. Center the booms, and attach the transport chains.
6. Lower the stabilizers until the chains become taut.

CAUTION: Be sure the transport chains are in position before traveling on roads or between job sites. Keep tractor speed within safe limits to prevent the machine from tipping over around sharp curves, on hillsides or over rough terrain.

Figure 12 - Backhoe in Transport Position

Backhoe Removal

If only the backhoe is to be used for a considerable time, it is advantageous to remove the backhoe from the tractor.

CAUTION: Before starting removal, activate each backhoe control lever to full direction until the associated valve separates and the backhoe cylinders are filled with oil.

1. Park the tractor on a hard, level surface.

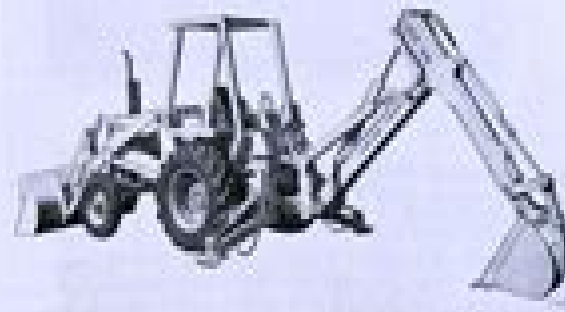

Figure 13 - Backhoe in Tripod Position

2. Lower the stabilizers, and position boom, dipper and bucket so that a tripod is formed as shown in Figure 13.
3. Lower the stabilizers far enough to relieve pressure on the bolts which mount the backhoe frame to the tractor mounting arms. If the bolts bind, use the stabilizers to separate the backhoe until bolt pressure is relieved; use only a minimum amount of movement, shut off tractor engine.
4. Remove the hammer blocks, cone washers and bolts from the tractor mounting arms and backhoe frame, see Figure 14. Loosen blocks by striking with a sledge hammer. Disconnect the dipper lift wire if so equipped.
