

# The Cell Cycle

What controls the life and development of a cell?

## Why?

An old piece of poetry says "to everything there is a season... a time to be born, a time to die." For cells, the line might say "a time to divide and a time to grow." In multicellular organisms, different types of cells have different roles and need to complete specific tasks. For example, a cell that isn't large enough is not useful for storing nutrients for later, but a cell that is too large will not be useful for transportation through a tiny capillary. In this activity, you will learn about the seasons of a cell's life, and in turn better understand how organisms function.

## Model 1 – The Cell Cycle

1. How many phases are in the cell cycle as shown in the diagram in Model 1?

The cell cycle consists of four main phases

2. Starting at the started cell, what is the order of the stages of a cell's life?
  1. G<sub>1</sub> phase (Gap 1): The cell grows and carries out its normal functions.
  2. S phase (Synthesis): DNA replication occurs during this phase.
  3. G<sub>2</sub> phase (Gap 2): The cell continues to grow and prepares for cell division.
  4. M phase (Mitosis): This phase includes mitosis (nuclear division) and cytokinesis (division of the cytoplasm) and leads to the creation of two daughter cells.
3. During which phase does the size of the cell increase?

During the G<sub>1</sub> phase (gap 1)
4. During which phase does the number of cells increase?

During the Mitosis phase
