Decision Making in Systems Engineering and Management Gregory S. Parnell, Patrick J. Driscoll, Dale L.

Henderson, 2011-03-16 *Decision Making in Systems Engineering and Management* is a comprehensive textbook that provides a logical process and analytical techniques for fact based decision making for the most challenging systems problems. Grounded in systems thinking and based on sound systems engineering principles, the systems decisions process SDP leverages multiple objective decision analysis, multiple attribute value theory, and value focused thinking to define the problem, measure stakeholder value, design creative solutions, explore the decision trade off space in the presence of uncertainty, and structure successful solution implementation. In addition to classical systems engineering problems, this approach has been successfully applied to a wide range of challenges including personnel recruiting, retention, and management, strategic policy analysis, facilities design, and management resource allocation, information assurance, security systems design, and other settings whose structure can be conceptualized as a system.

Automation in Textile Machinery L. Ashok Kumar, M. Senthil Kumar, 2018-03-20 Automation is the use of various control systems for operating equipment such as machinery and processes. In line with this, this book deals with comprehensive analysis of the trends and technologies in automation and control systems used in textile engineering. The control systems described in all chapters is to dissect the important components of an integrated control system in spinning, weaving, knitting, chemical processing, and garment industries, and then to determine if and how the components are converging to provide manageable and reliable systems throughout the chain from fiber to the ultimate customer. **Key Features:** Describes the design features of machinery for operating various textile machineries in product manufacturing. Covers the fundamentals of the instrumentation and control engineering used in textile machineries. Illustrates sensors and basic elements for textile automation. Highlights the need of robotics in textile engineering. Reviews the overall idea and scope of research in designing textile machineries.

Closed Loop Control and Management Serge Zacher, 2023-02-13 The block diagrams as engineering means for closed loop control which have been established by classic control theory for decades are replaced in the above mentioned book by networks. The signals are replaced by data. It corresponds to the Industry 4.0 and to the structure of today's automatic control systems. Thereby, a classic closed loop is treated not isolated from other elements of nowadays automation like bus communication and process logical control and is completed in proposed book with new control elements so called data stream managers DSM. The proposed book treats the control theory systematically like it is done in classical books considering the new concept of data management. The theory is accompanied in the book with examples, exercises with solutions, and MATLAB simulations.
