

## Microsoft Office 365 for Citrix XenApp and XenDesktop 7.x

Microsoft Office 365 ProPlus is a bundled software plus subscription-based offering focused on user productivity-based applications. Office 365 ProPlus includes a combination of online-based applications (Outlook, Word, Excel, PowerPoint and OneNote) that are accessed from anywhere via a web browser, as well as the latest traditional, locally installed version of Microsoft Office. Included with Office 365 ProPlus is an online email account with 50GB of storage and 1TB of file storage per user with OneDrive for Business.

Office 365 is a great solution for any organization, but due to user, application and business requirements, there is often a requirement for a locally installed version of the Office applications in addition to the online versions. Typically, organizations require the locally installed versions for the following reasons:

- Require full application functionality not currently available with the online version
- Require access to Office applications not available in an online delivery method (Visio, Project, Access, Publisher, Lync)
- Line-of-business applications have a dependency on locally installed versions of an Office application

These challenges are relevant for the majority of organizations.

Although all editions can be utilized within a XenApp or XenDesktop solution, when choosing between Office 365 editions Citrix recommends a minimum of Office 365 Business Premium while Office 365 Enterprise E3 or higher is highly recommended for their broader analytics and capabilities.

Historically, the most common applications delivered via Citrix XenApp is Microsoft Office for its ability to provide the user with the latest version of Office with the best user experience. With Office 365 ProPlus, the value of Citrix XenApp has not changed. In order to properly delivery Office 365 to users, the following recommendations are provided to give the user the best experience without causing a significant impact to the underlying infrastructure.

## Outlook

As part of an Office 365 implementation, organizations can utilize Exchange Online instead of managing and maintaining their own copies of Exchange. As part of an Exchange Online implementation, the deployment of the Outlook client requires a user to choose between two options: Cached Exchange Mode or Online Mode. The decision will impact the user experience and infrastructure.

	Online Mode	Cached Exchange Mode
Description	Keeps a constant network connection to the backend Exchange server.	Continuously synchronizes the user's mailbox and address book to a local file, eliminating service disruptions due to sporadic or latent network connectivity.
When to use	Constant, always-on, low latency network connection to Exchange online.	Users require access to email when disconnected from the network or when link is latent.
