

Depression as a Psychoanalytic Problem

Over the past few decades, psychoanalysis and dynamic psychiatry have been steadily stepping back from a key role in the understanding and treatment of depressive disorders. This book investigates the basis for such retreat by delving into the history of medicine, philosophy, religion, and literature. It unveils the social motives for the overwhelming consensus currently gathered by the biomedical model of depression. The book then moves on to discuss at depth psychoanalytic literature on depression and reveals how it possesses an enormous explanatory power for depression symptoms. This approach allows the author to offer readers a comprehensive, dynamically-oriented model of symptom formation in depression.

About the Author

Paolo Azzone is a psychiatrist and a psychoanalyst. He works at the G. Salvini Hospital in Milan, Italy. Azzone substantially contributed to the establishment of a psychotherapy research tradition in Italy, with empirical studies on the psychotherapy process and on dreams. His current interests include psychoanalytic treatment of depression and the intersections between psychoanalysis and philosophy, history, and religious experience. He is co-editor of *La mente dell'anima (The Mind of Soul)*, 2008.

Mendelson, 2011-10-01 **Finding the Body in the Mind** Marianne Leuzinger-Bohleber, 2018-03-26 Since the 1990s many different scientific disciplines have intensified their interest in the so called mind body problem psychoanalysis philosophy academic psychology cognitive science and modern neuroscience The conceptualization of how the mind works has changed completely and this has profound implications for clinical psychoanalytical practice as well as for theorizing in contemporary psychoanalysis The question of how unconscious fantasies and conflicts as well as traumatic experiences can be understood and worked through is and has been one of the central topics of psychoanalysis Interdisciplinary studies from the fields of embodied cognitive science epigenetics and cognitive neuroscience offer challenging explanations of the functions in the analysts mind which might allow him to create spontaneous associations through which he unconsciously understands the traumatic embodied experiences of the patient **A Neuro-Psychoanalytical Dialogue for Bridging Freud and the**

Neurosciences Sigrid Weigel, Gerhard Scharbert, 2015-08-03 The book presents an overview of the term neuropsychanalysis and traces its historical and scientific foundations as well as its cultural implications It also turns its attention to some blind spots open questions and to what the future may hold It examines the cooperative and conflicted relationship between psychoanalysis and neuroscience Articles from different fields investigate the neurological basis of psychoanalysis as well as the psychological terms of neurology They also discuss what psychoanalysis has to offer neuroscience In addition the emerging neuro psychoanalytical dialogue is enriched here by the voice of a culturally informed history of science The book brings leading authorities on these topics into conversation with each other creating an unprecedented opportunity to better understand the language of the psyche Specific concerns include the discussion of corporeality how the body figures into psychoanalysis the meaning of the unconscious in connection with dreams unconscious fantasies and the field of epigenetics Following a historical perspective the book provides a re reading of Freud s drive theory exploring his concept of life at the threshold of science and culture as well as the relationship between various representations somatic states and the origin of drive Overall the book argues that if the different methodological approaches of psychoanalysis and neuroscience are acknowledged not only for their individual uniqueness but also as a dialectic then the

resulting epistemological and methodological dialogue might open up a fascinating body of neuropsychanalytical knowledge

Risks and Problem Behaviors in Adolescence Richard M. Lerner, Christine M. O'Hanessian, 2014-02-04 The articles in this volume illustrate how development is propelled by the bidirectional relations that occur between the person and all levels of the context The authors argue that adolescent life is embedded in a complicated developmental system involving multiple features of the individual e g biology emotions personality and cognition and the multiple levels of his or her social ecology e g peers family school the workplace and the public policy and legal systems that structure and impact behavioural opportunities for and the actions of adolescents These articles have important implications for the design of interventions aimed at adolescent problem behaviours

Depression Conceptualization and Treatment Christos Charis, Georgia Panayiotou, 2021-05-03 Depression a highly common clinical disorder is an important and clinically relevant topic for both clinical researchers and practitioners to address because of its prevalence impact on the individual and society association with other mental and physical health problems and the social contexts in which it develops Depression ranks in Germany and central Europe as the third among the leading mental disorders and world wide is a leading cause of disability It is estimated that 8 3 % of the German population is depressed within a year 11 2 % women 5 5 % men These statistics mean that 4 million people per year are depressed in Germany alone one year prevalence According to the WHO over 300 million people world wide experience depression and in the USA the financial burden of this disorder due to disability and work absenteeism reaches Depression is also becoming more frequent over time and has a high risk of recidivism particularly since its most common form Major Depressive Disorder DSM 5 ICD10 tends to occur in episodes For example 20% to 40% of people become depressed again within two years after their first depressive episode meaning that a major aim of any therapeutic intervention should be to prevent future relapses Depression also shows very high comorbidities with other mental and physical health conditions Its overlap with anxiety pathology is so high that clinicians are concerned with whether the two disorder categories are indeed distinct or if they show substantial etiological overlap Depression is also associated with heart disease and even cancer making it a risk factor for mortality and morbidity that needs to be identified early and addressed effectively In addition to Major Depressive Disorder the often severe Bipolar Disorder and the chronic form of Depression referred to as dysthymia are additional mood disorders that among them require careful differential diagnosis They also lead to questions regarding their common or distinct etiological mechanisms In order to gain a better understanding of Depression as a clinical disorder one needs to look at it as a multifaceted phenomenon Depression is a neurobehavioral condition and one has to be up to date and have solid understanding of its biological substrate at a genetic neuronal hormonal and pharmacological level Depression is also a socio demographic phenomenon and one needs to examine its epidemiology that might contain significant cues towards its clearer understanding It is more prevalent for example in certain regions climates age groups and genders much more prevalent in women with age of appearance in young adulthood

but also presents as a significant problem for youth and the elderly is associated with stereotypes and stigma and can be the aftermath of crises trauma and loss The etiology of Depression remains under scrutiny though recently much more knowledge is emerging from contemporary neuroimaging genotyping and data science methods Different neural and behavioral systems may be involved contributing to the significant heterogeneity within the disorder Social roles stressors attachment patterns family support and social networks and individual e g gender linked vulnerabilities may contribute significantly towards increasing risk for developing depression Different therapeutic approaches like those stemming from the psychoanalytic psychodynamic perspectives and those stemming from the cognitive behavioral 2nd and 3rd wave tradition focus on the components of etiology considered most dominant As science progresses with clearer evidence regarding the important etiological factors and their interactions these different perspectives each with its own contribution may need to take new developments into consideration adapt and even begin to converge These different aspects of the topic of Depression which are central to the scientific aims of clinical scientists but also permeate the way clinicians approach assessment diagnosis case formulation and treatment become the focus of the present volume Following a conference held at the University of Cyprus in Nicosia Cyprus in October 2019 which included presentations by internationally renowned experts in the field on these various aspects of Depression the idea of extending the topics presented and discussed at the meeting into more elaborated and substantive chapters and synthesizing them into an edited volume was generated The aim was to fill a substantive gap with a volume that would be beneficial to a wider interdisciplinary audience of clinicians trainees and researchers with examine the different aspects of Depression In this Edited volume with contributions from prominent experts in the field we propose to discuss the subject of conceptualizing and treating Depression and related conditions e g Suicide Bipolar Disorder from different theoretical perspectives and after taking into consideration current research into the etiology and maintenance of this condition Chapters on theoretical perspectives of treatment cover a wide range of approaches that could be broadly clustered under behavioural and psychodynamic points of view Perspectives discussed in this volume are psychodynamic therapy 2nd waver CBT acceptance and commitment therapy and mentalization therapy Special topics with great relevance to treatment include treatment in different levels of care e g partial hospital setting prevention of suicide working with cancer patients The book provides a unique combination of current empirical findings on etiology of depression and suicide treatment considerations and practical recommendations treatment in different settings and combination of different theoretical perspectives that can enrich a therapists repertoire of tools for understanding and approaching depression The book describes various theoretical approaches without adhering to anyone but with an effort to highlight common underlying themes like issues of loss self esteem guilt grief and emotion regulation as these permeate the various perspectives In this way the book presents a combination of science and practice and of various views that constitute an excellent resource of researchers clinicians and students of mental health professions In a final chapter the two editors

Drs Christos Charis and Georgia Panayiotou make an effort to impartially integrate information from the various perspectives highlighting the utility of each approach to address specific vulnerability and etiological factors discussed in the book In this regard the volume stresses the idea of the need for continuous and open dialogue between perspectives theories levels of investigation research areas practitioner needs and scientific views to help make progress in treatment and address this complex and multi faceted phenomenon in the service of patients their carers and societies in general **The Scandinavian Psychoanalytic Review** ,1988 **Tasman's Psychiatry** Allan Tasman,Michelle B. invalidity benefits and that this was a social problem rising across the OECD but more so in the UK NICE had already published a clinical guideline recommending several talking therapies that were cost effective Why could no one still get them In 2007 under New Labour the world s first universal free at the point of need service was launched to remedy this IAPT Improving Access to Psychological Therapies Thus began a race against depression predicted by the World Health Organisation to become the leading cause of disability worldwide by 2020 But on the eve of NICE s new guideline for depression due in 2021 it is now clear that across large parts of the UK we are set to lose this race Badly Why What went wrong Clarke Cundy and Yakeley have brought together a group of researchers and experts in this collection who address some of the fundamental flaws in the policy design for IAPT By drawing attention to neglected social and interpersonal origins of depression pointing us towards more effective approaches and seeking to pinpoint some of the gaps in thinking during IAPT s first decade this book offers alternative answers to what still remains Britain s biggest social problem
