Design of Rainwater Harvesting System Ahmad Kamruzzaman Majumder, Minhaj Uddin Ahmed, 2014-11-01 Rainwater Harvesting System RWHS is a technique of water collection which has been used since ancient times A simple affordable technically feasible and socially acceptable safe drinking water supply system in difficult geo hydrological areas is very much in demand RWHS can be considered as a probable solution of drinking water crisis in arsenic affected areas saline zone in the coastal areas and areas prone to declining water table etc Here we have analyzed the rainfall characteristic of Bangladesh In Bangladesh 85 percent of its annual rainfall during the monsoon and the average rainfall in a year is 2400 mm Maximum rainfall is occurred in North East Chittagong and coastal zone and minimum in Western parts Another important purpose of the study was to design Rain Water Harvesting System Mainly the reservoir tank as well as to determine the quality of water Here we have designed software for calculating the size of the reservoir of RWHS The water quality result shows that 83 percent samples are free from faecal coliforms Based on this discussion Rainwater Harvesting System can become the most suitable solution for potable water

Modern Potable Rainwater Harvesting Daniel Brown, 2015-02-09 Modern Potable Rainwater Harvesting shows how to design build and maintain a rainwater system that consistently and reliably provides potable water that is orders of magnitude cleaner than typical public municipal water The book covers advanced oxidation processes disinfection biofilm control filtration plumbing electronic controls and water testing Electronic schematics of essential control circuits are provided Plumbing diagrams for both on grid and off grid systems are provided Proper pump sizing for a given storage capacity is discussed The book shows how to use a spreadsheet to properly size storage capacity based on actual rainfall data collection area and assumed daily usage rate Mechanical design and fabrication details of key components are provided such as automatic first flush divert valves a rainwater pre filter disinfectant injection and a water level sensor The book contains unique information not found anywhere else some of which disputes the teachings found in other sources As one book reviewer put it I thought I knew everything there is to know about rainwater harvesting but this book is lightyears ahead of anything I ve seen The book is not written by an armchair theoretician but by an actual practitioner who has successfully maintained a system on his own private residence as the only source of potable water for several years The book also demonstrates how private rainwater harvesting stimulates real water conservation as opposed to the futile efforts of governments and public utilities

Rainwater Harvesting System in Ajk, Pakistan Tallal Bin Aftab,Bahadar Nawab

Khattak,Syed Ali Hasnain,2011-11-02 Fresh water resources especially ground water are getting scarce at a rapid pace in arid and semi arid countries like Pakistan due to drastically increased gap between renewable supply and demand This study assesses the appropriateness of different aspects of rooftop rainwater harvesting system as an alternative of ground water installed at Chitra Topi a mountainous area in district Bagh where annual rainfall measures up to 1600mm Various implementation modes of this practice design and potential of RRWHS and finally assessment of the water quality of rainwater from households was carried out and analyzed throughout different periods In village Chitra Topi mostly women and children fetch few liters of water in small containers from distant springs to meet all domestic needs every day Based on results it is concluded that rainwater harvesting systems were shown to be a relatively low cost option for improving a households geographical and temporal access to a water source increasing convenience and decreasing collection times

Optimal Design of Rain Water Harvesting Tank in Urban Area Frmesk Hatem Mohammed,2018 It s clear that ground water level continually drops down quickly due to over extracting and insufficiently of surface water climate change and population growth are factor which lead the demand to increase so that rainwater harvesting system is introduced which collects rainwater from rooftops and then design an optimum size for the storage tank This technic helps to solve this problem by allocating another renewable source of water supply This study is conducted by collecting the primary data from the field directly doing experiments secondary data such as mean monthly rainfall in Erbil form the Ministry of Agricultural and Water Resources in Erbil The CLIMEWAT 2 0 and CROPWAT programs have been used to determine evapotranspiration The tank size is calculated in the best way with best suitable price so the final model and design of the RWH system can be developed This will help government and people to deal with water supply issue in Kurdistan especially in Erbil
