from leading international academics has been drawn together with the experience from some of the industry's foremost SCM practitioners to provide both the experienced researcher and the industry practitioner a thorough grounding in its principles as well as an illustration of SCM as a methodology for enhancing construction industry project success. The new edition of *Successful Construction Supply Chain Management: Concepts and Case Studies* incorporates chapters dealing with Building Information Modelling, sustainability, the Demand Chain in projects, the link between self-organizing networks and supply chains, decision making, Lean and mega projects. Other chapters cover risk transfer and allocation, behaviors, innovation, trust, supply chain design, alliances, and knowledge transfer. Supply Chain Management techniques have been used successfully in various industries such as manufacturing and food processing for decades. Fully updated with new chapters dealing with key construction industry topics such as BIM, sustainability, the Demand Chain in projects, Lean mega projects, and more. Includes contributions from well-established academics and practitioners from Network Rail, mainstream construction, and consultancy. Illustrates how SCM methodologies can be used to enhance construction industry project success. *Successful Construction Supply Chain Management: Concepts and Case Studies* is an ideal book for postgraduate students at MSc and PhD level studying the topic and for all construction management practitioners.

ECPPM 2021 - eWork and eBusiness in Architecture, Engineering and Construction Vitaly Semenov, Raimar J Scherer, 2021-07-25

eWork and eBusiness in Architecture, Engineering and Construction 2021 collects the papers presented at the 13th European Conference on Product and Process Modelling ECPPM 2021 Moscow 5-7 May 2021. The contributions cover a wide spectrum of thematic areas that hold great promise towards the advancement of research and technological development targeted at the digitalization of the AEC/FM Architecture, Engineering, Construction, and Facilities Management domains. High-quality contributions are devoted to critically important problems that arise, including Information and Knowledge Management, Semantic Web and Linked Data, Communication and Collaboration Technologies, Software Interoperability, BIM, Servers and Product Lifecycle Management Systems, Digital Twins and Cyber Physical Systems, Sensors and Internet of Things, Big Data, Artificial and Augmented Intelligence in AEC, Construction Management, 5D/nD Modelling and Planning, Building Performance Simulation, Contract Cost and Risk Management, Safety and Quality, Sustainable Buildings and Urban Environments, Smart Buildings and Cities, BIM Standardization, Implementation and Adoption, Regulatory and Legal Aspects, BIM Education and Training, Industrialized Production, Smart Products and Services. Over the past quarter century, the biennial ECPPM conference series, as the oldest BIM conference, has provided researchers and practitioners with a unique platform to present and discuss the latest developments regarding emerging BIM technologies and complementary issues for their adoption in the AEC/FM industry.

Handbook of Model-Based Systems Engineering Azad M. Madni, Norman Augustine, Michael Sievers, 2023-07-25. This handbook brings together diverse domains and technical competences of Model Based Systems Engineering (MBSE) into a single comprehensive publication. It is intended for researchers, practitioners and students, educators who require a wide ranging and authoritative reference on MBSE with a multidisciplinary global perspective. It is also meant for those who want to develop a sound understanding of the practice of systems engineering and MBSE and/or who wish to teach both introductory and advanced graduate courses in systems engineering. It is specifically focused on individuals who want to understand what MBSE is, the deficiencies in current practice that MBSE overcomes, where and how it has been successfully applied, its benefits and payoffs, and how it is being deployed in different industries and across multiple applications. MBSE engineering practitioners and educators with expertise in different domains have contributed chapters that address various uses of MBSE and related technologies such as simulation and digital twin in the systems lifecycle. The introductory chapter reviews the current state of practice, discusses the genesis of MBSE and makes the business case. Subsequent chapters present the role of ontologies and meta models in capturing system interdependencies, reasoning about system behavior with design and operational constraints, the use of formal modeling in system model verification and validation, ontology enabled integration of systems and system of systems, digital twin enabled model based testing, system model design, synthesis, model based tradespace exploration, design for reuse, human system integration and role of simulation and Internet of Things (IoT) within MBSE.

Communicating Sustainability Margaret Robertson, 2018-07-27. *Communicating Sustainability* is a book of evidence based strategies for making sustainability vivid, accessible and comprehensible. To do this, it brings together research from a range of specialties including cognitive psychology, visual perception, communication studies, environmental design, interpretive exhibit design, interpretive signage, wayfinding, storytelling, courtroom litigation, information graphics and graphic design to illustrate not only what approaches are effective but why they work as they do. The topic of sustainability is vast and complex. It interconnects multiple dimensions of human culture and the biosphere and involves a myriad of systems and processes, many of which are too large, too small, too fast or too slow to see. Many people find verbal explanations about all of this too abstract or too complicated to understand and for most people the concepts of sustainability are regarded as

quirky peripheral and not essential to everyday life Yet the challenges of sustainability concern the very survival of most species of life on Earth including the human species In order for life as we know it to survive and thrive into the future sustainability must become broadly understood by everyone not just activists or specialists This book offers tools to help make complex systems and nuanced abstract ideas concrete and comprehensible to the broadest range of people The goal of communication and of this book is to build understanding
