Jeffery A. Packer, Wardenier, Kurobane, **Fatigue Design Procedure for Welded Hollow Section Joints** X-L Zhao, J A Packer, 2000-05-08 This International Institute of Welding IIW report was presented at the 52nd Annual Assembly in Lisbon in June 1999 It contains recommendations representing a consensus on international best practice focusing on a hot spot stress approach A wide range of joint types is covered the new fatigue design curve for both RHS and CHS is dealt with and detailed values for stress concentration factors are provided The purpose of this current IIW document is to serve both as an International Standards Organisation ISO draft specification and as a model standard for national and regional specifications worldwide The Recommendations Part one and Commentary Part two were edited by Dr X L Zhao of Monash University Australia and Professor J A Packer of the University of Toronto Canada Tubular Structures IX Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams **Tubular Structures XII** Z.Y. Shen, Y.Y. Chen, Xian-zhong Zhao, 2008-09-11 Presentation of the latest scientific and engineering developments in the field of tubular steel structures Covers key and emerging subjects of hollow structural sections such as static and fatigue behaviour of connections joints concrete filled hollow sections and composite tubular members offshore structures earthquake resistance Tubular Structures XIV Leroy Gardner, 2012-08-24 Tubular Structures XIV contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 14th International Symposium on Tubular Structures ISTS14 Imperial College London UK 12-14 September 2012 The International Symposium on Tubular Structures ISTS has a long standing reputation for b **Design Guide for Hollow Structural Section Connections** J. **Contribution on the behavior of welded joints to metallic structural elements with tubular section** Dr.-Ing. Patrick Heinemann, 2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made of hollow section profiles are mainly used for construction structures There are many fields of applications for structures made of hollow section profiles Hollow section profiles are lightweight and have got a high resistance to compression which is an advantage for column structures The most common profile types have squared or circular hollow cross sections Connecting two or more pipes by welding the

joints have got different shapes These joints are part of trusses or columns with a tree shaped optic The standards have got restrictions regarding the geometry material or load cases By choosing a node which is excluded in the standards designing engineers have to create their own models This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created In this thesis only uniplanar joints are investigated A special focus is on the welding line which has got a three dimensional shape The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint Beside this the profile shape and profile thickness vary to see the differences in their resistance Square and circular hollow section profiles are in focus To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle The structure of the thesis is split into four main parts Firstly there is an explanation of the general topic with its difficultness Secondly there is the state of the art presentation of literature and standards in this range Thirdly there is a numerical analysis of the joints The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations Fourthly there is an experimental verification of the numerical tests It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly This effect is non linear Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section

Packer,Silke Willibald,2006-07-31 This topical book contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 11th International Symposium and IIW International Conference on Tubular Structures The International Symposium on Tubular Structures ISTS has a long standing reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research developments and applications in this field Various key and emerging subjects in the field of hollow structural sections are covered such as novel applications and case studies static and fatigue behaviour of connections joints concrete filled and composite tubular members earthquake resistance specification and code developments material properties and structural reliability impact resistance and brittle fracture fire resistance casting and fabrication innovations Research and development issues presented in this book are applicable to buildings bridges offshore structures entertainment rides cranes towers and various mechanical and agricultural equipment This book is thus a pertinent reference source for architects civil and mechanical engineers designers steel fabricators and contractors manufacturers of hollow sections or related construction products trade associations involved with tubing owners or developers of tubular structures steel specification committees academics and research students The conference presentations herein include two keynote lectures the International Institute of
