Inclusive Interactions P. Langdon, P. John Clarkson, P. Robinson, 2010 Designing Inclusive Interactions responds to the recent changes in the research landscapes in the fields of Human Computer Interaction Computer Science and Healthcare as a result of new technology and innovation Research into accessibility for interface design has always represented an unconventional multi disciplinary arena of pragmatic disciplines such as experimental psychology engineering design and rehabilitation practice It has moved from isolated activities in disparate fields to the more interdisciplinary perspective evident today in areas such as healthcare and inclusive design As a result of this there is now a need for the transfer of knowledge and techniques from inclusive design research into the wider community This book is divided into five areas Understanding Users for Inclusive Design Measuring Inclusion Inclusive Interaction Assistive Technology Inclusion and Healthcare The papers were selected by reference to the peer assessments of an international panel of reviewers from many key disciplines such as computer science assistive technology engineering and product design This book represents a sample of leading national and international research in the fields of inclusive design universal access and assistive and rehabilitative technology We hope that this will encourage inter disciplinary research leading to better designs effectively reducing exclusion and difficulty in the workplace at home and at leisure **Designing Inclusive Interactions** P.

Situational inclusive interfaces and The historical perspective 20 years of CWUAAT CWUAAT has always aimed to be inclusive in the fields that it invites to the workshop We must include social science psychologies anthropologies economists politics governance and business This requirement is now energised by imminent new challenges arising from techno social change In particular artificial intelligence wireless technologies and the Internet of Things generate a pressing need for more socially integrated projects with operational consequences on individuals in the built environment and at all levels of design and society Business cases and urgent environmental issues such as sustainability and transportation should now be a focus point for inclusion in an increasingly challenging world This proceedings book continues the goal of designing for inclusion as set out by the CWUAAT when it first started

Disability Interactions Catherine Holloway, Giulia Barbareschi, 2021-12-22 Disability interactions DIX is a new approach to combining cross disciplinary methods and theories from Human Computer Interaction HCI disability studies assistive technology and social development to co create new technologies experiences and ways of working with disabled people DIX focuses on the interactions people have with their technologies and the interactions which result because of technology use A central theme of the approach is to tackle complex issues where disability problems are part of a system that does not have a simple solution Therefore DIX pushes researchers and practitioners to take a challenge based approach which enables both applied and basic research to happen alongside one another DIX complements other frameworks and approaches that have been developed within HCI research and beyond Traditional accessibility approaches are likely to focus on specific aspects of technology design and use without considering how features of large scale assistive technology systems might influence the experiences of people with disabilities DIX aims to embrace complexity from the start to better translate the work of accessibility and assistive technology research into the real world DIX also has a stronger focus on user centered and participatory approaches across the whole value chain of technology ensuring we design with the full system of technology in mind from conceptualization and development to large scale distribution and access DIX also helps to acknowledge that solutions and approaches are often non binary and that technologies and interactions that deliver value to disabled people in one situation can become a hindrance in a different context Therefore it offers a more nuanced guide to designing within the disability space which expands the more traditional problem solving approaches to designing for accessibility This book explores why such a novel approach is needed and gives case studies of applications highlighting how different areas of focus

from education to health to work to global development can benefit from applying a DIX perspective We conclude with some lessons learned and a look ahead to the next 60 years of DIX
