

Classification

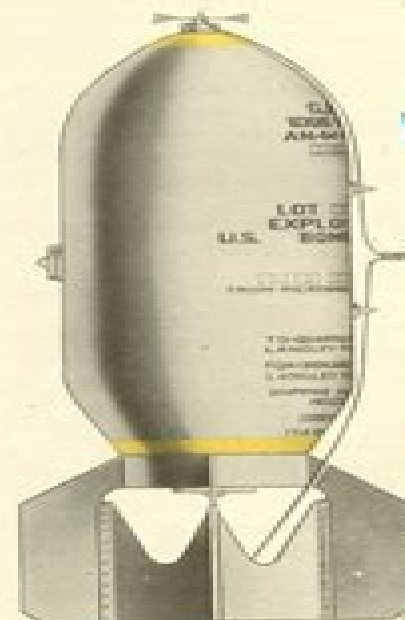

Bombs are normally classified or typed according to the purpose for which they are designed and the type of filler used.

General Purpose bombs cause destruction by blast and vacuum pressures when they explode above ground, by earth shock when they explode below ground. These bombs are of the AN-M series and resemble each other closely. They differ mainly in size, weight, and weight of explosives.

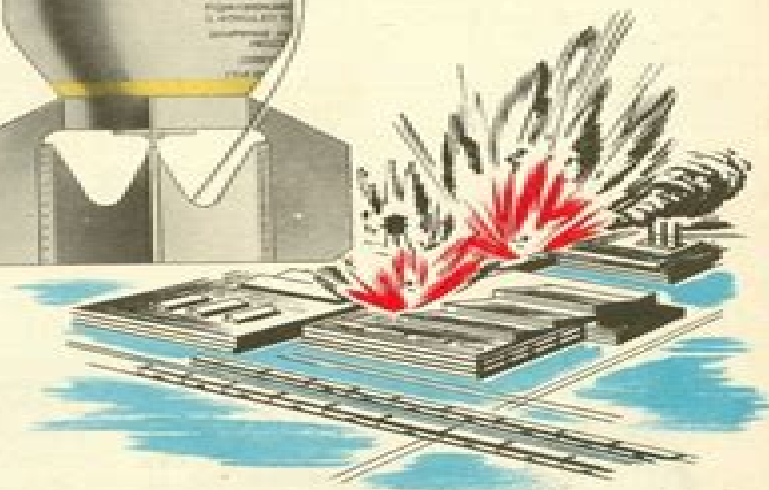

Light Case bombs, as the name implies, have such light cases that about 80% of the total weight is explosive. The 4000-lb. block buster is a light case bomb and is used to raze areas equal to a city block or more.

Armor-Piercing bombs are used against heavily armored battleships, and against structures of stone or reinforced concrete. They have an extra heavy case and a sharp nose. High explosive comprises about 5 to 15% of their weight.

In order to penetrate the deck armor of modern battleships, armor-piercing bombs must be dropped from a bombing altitude of at least 15,000 feet.
