Accuracy and Calibration Failures in Science and Engineering Michael D. Holloway, 2025-11-25 Safeguard your operational integrity and data reliability with this essential technical and investigative guide which critically examines and provides actionable frameworks to combat the dangerously undercommunicated risks of calibration drift and systemic measurement failures across all industries As industries grow more complex and digitized the demand for precision and reproducibility has escalated placing extraordinary reliance on sensors analytical instruments and automated data systems This evolution has exposed systemic vulnerabilities such as outdated calibration protocols unvalidated assumptions and fragmented oversight across lifecycle stages This book is a technical and investigative work that critically examines the overlooked misunderstood and dangerously undercommunicated issues of calibration drift traceability loss and systemic measurement failures across science engineering and industry The book provides a structured in depth exploration of how calibration standards shift without timely notification and the cascading consequences this can have on data reliability regulatory compliance safety and decision making The content spans from foundational concepts in calibration and metrology to detailed technical analyses of failure modes in sensors instruments and analytical systems The book emphasizes the interconnectedness of human factors systemic inertia and institutional resistance to change delivering actionable frameworks for building resilience including updated ISO standards failure mode and effects analysis checklists dashboards and protocols

Investigating Human Error Barry Strauch, 2017-03-16 In this book the author applies contemporary error theory to the needs of investigators and of anyone attempting to understand why someone made a critical error how that error led to an incident or accident and how to prevent such errors in the future Students and investigators of human error will gain an appreciation of the literature on error with numerous references to both scientific research and investigative reports in a wide variety of applications from airplane accidents to bus accidents to bonfire disasters Based on the author's extensive experience as an accident investigator and instructor of both aircraft accident investigation techniques and human factors psychology it reviews recent human factors literature summarizes major transportation accidents and shows how to investigate the types of errors that typically occur in high risk industries It presents a model of human error causation influenced largely by James Reason and Neville Moray and relates it to error investigations with step by step guidelines for data collection and analysis that investigators can readily apply as needed This second edition of Investigating Human Error has been brought up to date throughout with pertinent recent accidents and safety literature integrated It features new material on fatigue distraction eg mobile phone and texting and medication use It also now explores the topics of corporate culture safety culture and safety management systems Additionally the second edition considers the effects of the reduction in the number of major accidents on investigation quality the consequences of social changes on transportation safety such as drinking and driving cell phone use etc the contemporary role of accident investigation and the effects of the prosecution
