Server-Driven Web Apps with htmx R. Mark Volkmann,2024-08-14 htmx is a library that adds logic and server interaction to HTML you get the effect of using a front end SPA framework without writing front end code Use any server side programming language and framework to build server applications with endpoints that simply return snippets of HTML Dynamically update portions of the current web page from HTTP responses Add interactivity with JavaScript and libraries such Alpine and \_hyperscript Make your apps more secure by escaping user supplied content and specifying a Content Security Policy Go beyond basic HTTP requests with WebSockets and server sent events The htmx JavaScript library gives you a new way to craft web applications The htmx approach differs significantly from that of the currently popular single page application SPA frameworks rather than write a bunch of JavaScript you simply annotate HTML elements before you send them to the browser The resulting code is easier to understand and modify and because it downloads less to the browser and doesn t need JSON creation and parsing you ll find it performs better too Rethink web application design write code in any language that simply responds to requests with htmx snippets Dynamically update portions of the current web page directly from the server Implement common patterns such as

lazy loading input validation CSS transitions active search optimistic updates pagination infinite scroll polling and click to edit Add interactivity with JavaScript and libraries such as Alpine and \_hyperscript Use the htmx JavaScript API to simplify DOM operations Make your web apps more secure escape user supplied content use Subresource Integrity hashes and enforce a Content Security Policy Go beyond the basic HTTP request response pattern with WebSockets and server sent events Discover a simpler way to implement web applications that emphasizes web fundamentals What You Need A modern web browser and the ability to build and run a local HTTP server using the server side language and framework of your choice The code examples are fully compatible with htmx 2 0      Client/Server Programming with Java and CORBA Robert Orfali, Dan Harkey, 1997-02-13 Software Programming Languages      *Java WebSocket Programming* Danny Coward, 2013-10-07 Master Application Development with Java WebSocket Build dynamic enterprise Web applications that fully leverage state of the art communication technologies Written by the leading expert on Java WebSocket programming this Oracle Press guide offers practical development strategies and detailed example applications Java WebSocket Programming explains how to design client server applications incorporate full duplex messaging establish connections create endpoints handle path mapping and secure data You ll also learn how to encrypt Web transmissions and enrich legacy applications with Java WebSocket Develop Web applications using the Java WebSocket API Create and publish annotated and programmatic endpoints Manage the lifecycle events of WebSocket endpoints Maintain reliable connections across the endpoint lifecycle Manage synchronous and asynchronous messaging Define encoding and decoding strategies for complex messaging Configure message timeouts size limits and exceptions Map message paths and route incoming URIs to Web containers Secure data authenticate users and encrypt connections      **Java EE and HTML5 Enterprise Application Development** John Brock, Arun Gupta, Geertjan Wielenga, 2014-03-28 Create Next Generation Enterprise Applications Build and distribute business web applications that target both desktop and mobile devices Cowritten by Java EE and NetBeans IDE experts Java EE and HTML5 Enterprise Application Development fully explains cutting edge highly responsive design tools and strategies Find out how to navigate NetBeans IDE construct HTML5 programs employ JavaScript APIs integrate CSS and WebSockets and handle security This Oracle Press guide also offers practical coverage of SaaS MVVM and RESTful concepts Explore HTML5 and Java EE 7 features Use NetBeans IDE editors templates and code generators Implement MVVM functionality with Knockout.js Dynamically map database objects using Java Persistence API Configure manage and invoke RESTful Web Services Maximize messaging efficiency through WebSockets Accept and process HTML5 Server Sent Events streams Employ Syntactically Awesome Stylesheets CSS3 and Sassy CSS      **CLIENT/SERVER PROGRAMMING WITH JAVA AND CORBA, 2ND ED (With CD )** Robert Orfali & Dan Harkey, 2007-05 Market\_Desc Programmers Developers Students in Graduate level Object or Java Courses Special Features Authors Proven track record on this topic they established themselves as the leaders in this area A lot of new technology about Java and CORBA is hitting at the end of

1997 perfect timing for an update of the book About The Book The hot topic at this year s JavaOne conference was Java CORBA programming and JavaBeans The first edition of this book was the bestseller at the conference Most of the new tools and products surrounding Java development will be CORBA based These tools are expected to ship by year s end Tools for JavaBeans are also expected to ship by year s end It s a perfect time to update one of our most successful programming books for these new products Our authors are in the thick of everyone s development plans for Java and CORBA JavaSoft and Sun are paying them to consult on JavaBeans Netscape and Oracle are wining and dining them about their CORBA expertise Symantec has asked them to consult on the next version of Visual Caf and both IBM and Microsoft are asking for their help on formulating their Java strategy In addition to their consulting services which gives them the inside scoop they also run a million lab at San Jose State where they are early beta testers on a lot of the tools and products discussed in the book This inside knowledge will allow them to write the definitive book on programming with Java and CORBA Pro JSF and Ajax

Jonas Jacobi, John R. Fallows, 2006-11-22 Pro JSF and Ajax shows you how to leverage the full potential of JavaServer Faces JSF and Ajax This is not an entry level tutorial but a book about building Ajax enabled JSF components for sophisticated enterprise level rich Internet applications Written by JSF experts and verified by established community figures including Adam Winer member of the JSF Expert Group Java Champion Kito D Mann JSFCentral.com and JSF in Action and Matthias Weendorf MyFaces this JSF 5 compatible book provides reliable and groundbreaking JSF components to help you exploit the power of JSF in your Java web applications This book provides a blueprint for building custom JSF user interface components and shows how to leverage the best browser technologies such as Ajax Mozilla XUL and Microsoft HTC to deliver rich Internet applications This book covers standard best practices for behavioral and renderer specific component classes renderers events and event listeners and JSP tag handlers for each It also covers advanced techniques such as dynamic content type negotiation JAR based resource delivery and dynamic render kit selection Foreword Does the world really and truly need another JavaServer Faces book I was fairly well convinced the answer could only be a resounding no After all there s a good half dozen books out in stores today by a whole host of web luminaries and I ve even personally helped as a technical reviewer on half of those So what more could really be said on the subject But when I thought about this a bit more it became clear that all of these books only go so far They ll show you how to use what JSF gives you out of the box throw you a bone for writing your own components and renderers maybe even a bit more But none that I ve seen get to the heart of why JSF is really and truly cool and important technology they make JSF look like YAMVCF Yet Another Model View Controller Framework for HTML more powerful here and there easier to use in many places a bit harder to use in others but really nothing major And certainly nothing that takes us beyond the dull basics of building ordinary looking web applications This book goes a lot further It ll cover the basics of course and show you how to build components but then it keeps going on to AJAX on to HTC on to XUL and how you can wrap this alphabet soup up underneath the heart of JSF its component model

and how you can leverage it to finally develop web applications that don't need radical re-architecting every time the winds of client technologies blow in a different direction. Along the way you'll learn a wide array of open source toolkits that make web magic practical even when you're not a Javascript guru. So heck I'm convinced The world does need another JSF book.
