Climate Change, Heat Stress, and U. S. Dairy Production United States Department of Agriculture, 2015-07-10 In the United States climate change is likely to increase average daily temperatures and the frequency of heat waves which can reduce meat and milk production in animals Methods that livestock producers use to mitigate thermal stress including modifications to animal management or housing tend to increase production costs and capital expenditures Dairy cows are particularly sensitive to heat stress and the dairy sector has been estimated to bear over half of the costs of current heat stress to the livestock industry In this report we use operation level economic data coupled with finely scaled climate data to estimate how the local thermal environment affects U S dairies effectiveness at producing outputs with a given level of inputs We use this information to estimate the potential decline in milk production in 2030 resulting from climate change induced heat stress For four climate model scenarios the results indicate modest heat stress related production declines over the next 20 years with the largest declines occurring in the South Climate change, heat stress, and U.S. dairy production Nigel David Key, Stacy Ellen Sneeringer, David Marquardt, 2014 *Climate Change, Heat Stress, and U. Artificial Intelligence and Heuristics for Enhanced Food Security Chandrasekar Vuppalapati, 2022-09-16. This book introduces readers to advanced data science techniques for signal mining in connection with agriculture. It shows how to apply heuristic modeling to improve farm level efficiency and how to use sensors and data intelligence to provide closed loop feedback while also providing recommendation techniques that yield actionable insights. The book also proposes certain macroeconomic pricing models which data mine macroeconomic signals and the influence of global economic trends on small farm sustainability to provide actionable insights to farmers helping them avoid financial disasters due to recurrent economic crises. The book is intended to equip current and future software engineering teams and operations research experts with the skills and tools they need in order to fully utilize advanced data science, artificial intelligence, heuristics, and economic models to develop software capabilities that help to achieve sustained food security for future generations.

Managing risks to build climate-smart and resilient agrifood value chains Food and Agriculture Organization of the United Nations, 2022-05-13. This work provides a preliminary analysis of the key climate risks affecting agrifood value chains and opportunities for climate services that reach stakeholders involved in all stages of the value chain from agrifood production to harvest, storage, and refrigeration, processing and packaging, transportation, markets, trade, and consumption. Climate services provide opportunities to effectively and comprehensively mainstream climate risk management across the entire agrifood value chain in addition to increasing sustainability and efficiency in the face of changing climate conditions. This report provides significant primary information and recommendations on the development of climate services across the agrifood value chain with a view to systematically enhance sustainable and resilient opportunities. It also provides a basis for further research and investment funding in this area. Its findings could spark follow up research and public and private

investment Agrarian Crisis in the United States Anthony Pahnke,2023-04-14 From fragile corporate controlled supply chains breaking down to millions of already hyper exploited farmworkers risking their lives in the fields without basic personal protective equipment the COVID 19 pandemic made it painfully obvious that US agriculture does not work Agrarian Crisis in the United States Pathways for Reform situates the many food system problems that the COVID 19 pandemic laid bare in historical context across four key policy areas namely in land labor markets and the environment In applying and building from the work of J rgen Habermas Agrarian Crisis in the United States highlights how deep seated problems concerning systemic racism economic inequality and political legitimacy endanger the US food and farm system s future Besides analyzing crises it presents solutions that would make agriculture in the United States more just and resilient through the implementation of certain communication and policy strategies Its original argument as well as a novel set of remedies will appeal to scholars and activists with interests in agrarian studies environmental policy and social movements

Heat Stress Impacts from Potential Climate Change on Texas Dairy Operations Sabrina Jasper, 2020 Projections of long term climate patterns suggest a steadily warming trend over the past 100 years with variable impacts on precipitation and other weather indicators It is well known that high ambient heat has deleterious effects on cattle wellbeing and milk production in conventional dairy facilities The purpose of this study was to evaluate the impacts of heat stress from projected climate change to milk production on dairy operations in Texas Using data from three prominent climate projections through the end of the 21st Century a daily time series of temperature humidity index THI values was developed for each climate projection and for two dairy production regions in Texas Deaf Smith County in the Texas Panhandle and Erath County in north central Texas Impacts on milk production were derived using previously published THI impact functions Results of the study indicate that dairies in north central Texas will face substantial heat stress impacts if any of the climate projections materialize while the impacts on operations in the Texas Panhandle will likely be less severe Under the most severe scenarios dairies will need to plan for sustained THI values in excess of 90 particularly in the summer months Based on the results heat mitigation efforts may be required for dairy operations to remain viable *Climate Change and Human Health* ,1996
