Abstract

In the period since the Industrial Revolution, human emissions of greenhouse gases from fossil fuel combustion, deforestation and agricultural practices have led to global warming and climate change. Observed and anticipated changes in the climate include higher temperatures, changes in rainfall patterns, changes in the frequency and distribution of weather events such as droughts, storms, floods and heat waves, sea level rise and consequent impacts on human and natural systems. Many scientists argue that the impacts of climate change will be devastating for natural and human systems and that climate change poses an existential threat to human civilisation. However, action to respond to climate change has been slow. Climate change draws attention to the relationship between science and society, challenges global governance institutions, and triggers new social movements. Engagement with climate change by social scientists is prompting conceptual renewal in areas such as social practice theory, and transition and transformation studies.

Overview

“Climate” is the average of the weather conditions at a particular point on the Earth. Typically, climate is expressed in terms of expected temperature, rainfall and wind conditions based on historical observations. “Climate change” is a change in either the average climate or climate variability that persists over an extended period.

The Earth’s climate has always changed. Changes in the Earth’s orbit, the energy output of the sun, volcanic activity, the geographic distribution of the Earth’s land masses and other internal or external processes can influence climate. Scientists refer to this type of long-term climate change as “natural

Relating Climate Change to Its Effects Central Intelligence Agency, Foreign National Foreign Assessment Center, 2005-12-01 Because climate can exert a profound influence on man's use of the environment interest in global climate is widespread and growing Still there is little consensus concerning the direction magnitude and timing of global climatic change there is no accepted methodology for determining what effect a global climate change would have on climate sensitive endeavors such as agriculture and data essential to this linkage process have not been readily available This report partially fills these voids It describes a simple model that evaluates the effect of climate It offers as an example an explanation of how the model was used to derive an estimate of grain production as a function of climate It provides a database that permits researchers to use the model to make estimates of the effects of climate on subjects of their interest It suggests ways to improve the reliability of such estimates in given geographic areas

A Human Health Perspective on Climate Change Interagency Working Group on Climate Change and Health (U.S.), 2010 An ad hoc Interagency Working Group on Climate Change and Health IWGCCCH assembled to develop a white paper on relevant federal research and science needs including research on mitigation and adaptation strategies Examples of mitigation and adaptation research needs are identified but a comprehensive discussion of these issues is not included These research and science needs broadly include basic and applied science technological innovations and capacities public health infrastructure and communication and education

Consideration is also given to the potential structure of a federal climate change and health research agenda and the use of scientific research results for applications and decision making The purpose of this paper is to identify research critical for understanding the impact of climate change on human health so that we can both mitigate and adapt to the environmental effects of climate change in the healthiest and most efficient ways Although the group recognizes the global nature of climate change's impacts on human health the primary focus of this paper is on the situation in the United States Page v

Fixing Climate Wallace S. Broecker, Robert Kunzig, 2005-06-25 Dealing with the Root Cause of Global Warming Calls for New Remedies Says Expert The product of a unique collaboration between a pioneering earth scientist and an award winning science writer Fixing Climate takes an unconventional approach to the vitally important issue of global warming Wallace S Broecker a longtime researcher at Columbia University's Lamont Doherty Earth Observatory warned about the possible consequences of global warming decades before the concept entered popular consciousness Hooked on climate studies since his student days he has learned largely through his own findings that climate changes naturally dramatically and rarely benignly He also knows from experience that when mankind pushes nature as we are currently doing by dumping some sixty to seventy million metric tons of carbon dioxide into the atmosphere every day climate will change even more dramatically and less benignly As Broecker points out if a well meaning fairy godmother were to turn us all into energysaving paragons at

the stroke of midnight tonight the resulting reduction in atmospheric carbon dioxide might lessen but could not turn aside the great warming tide now headed our way There is nonetheless a glimmer of hope in the development of new technologies that are directed not only at the reduction of carbon dioxide output but also at its harmless disposal Told by skilled science journalist Robert Kunzig Fixing Climate is a timely and informative story that makes for riveting reading

Climate Change and Water A.M.M Adeeb, 2012 In this paper an attempt is made to review recent research on the synergy between climate change and water specifically the attention paid to this area from the environmental science and climate change academic communities We scanned the titles of over 22 000 research papers from the top 12 journals from 2006 2010 in these two disciplines and analyzed in detail 135 papers specifically discussing climate change and water together Broadly the following topics were covered in the papers surveyed modeling rainfall temperature oscillations and circulations stream river flow runoff irrigation and agriculture floods and policy related We found modeling studies on global warming rainfall the hydrological cycle had the most papers while policy related ones numbered just a few The majority of research was skewed towards developed countries while developing countries which are most vulnerable to the impacts of climate change received lesser attention in areas that are most important to them like floods agriculture irrigation and stream river flow We conclude by sounding a note of caution about the inherent uncertainties of modeling studies highlight the broad agreement on increasing extreme weather events and emphasize that the adaptation discourse and practice must incorporate both hard and soft measures We also suggest some new approaches and research areas to tackle the pervasive multidisciplinary and crosscutting domain of climate change and water

Climate Change A. Barrie Pittock, 2013-11-26 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and

how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment Climate Change Research at Universities Walter Leal Filho,2017-06-02 This unique book provides a multidisciplinary review of current climate change research projects at universities around the globe offering perspectives from all of the natural and social sciences Numerous universities worldwide pursue state of the art research on climate change focussing on mitigation of its effects as well as human adaptation to it However the 2015 Paris 21st Conference of the Parties of the United Nations Framework Convention on Climate Change UNFCCC COP 21 demonstrated that there is still much room for improvement in the role played by universities in international negotiations and decision making on climate change To date few scientific meetings have provided multidisciplinary perspectives on climate change in which researchers across the natural and social sciences could come together to exchange research findings and discuss methods relating to climate change mitigation and adaption studies As a result the published literature has also lacked a broad perspective This book fills that gap and is of interest to all researchers and policy makers concerned with global climate change regardless of their area of expertise **Human Dimensions of Global Environmental Change** National Research Council,Division of Behavioral and Social Sciences and Education,Policy Division,Board on Environmental Change and Society,Committee on the Human Dimensions of Global Change and Committee on Global Change Research,1999-08-29 This publication is extracted from a much larger report Global Environmental Change Research Pathways for the Next Decade which addresses the full range of the scientific issues concerning global environmental change and offers guidance to the scientific effort on these issues in the United States This volume consists of Chapter 7 of that report Human Dimensions of Global Environmental Change which was written for the report by the Committee on the Human Dimensions of Global Change of the National Research Council NRC It provides findings and conclusions on the key scientific questions in human dimensions research the lessons that have been learned over the past decade and the research imperatives for global change research funded from the United States Research Anthology on Environmental and Societal Impacts of Climate Change Management Association, Information Resources,2021-10-29 Climate change is an issue that has been generating a significant amount of discussion research and debate in recent years Climate change continues to evolve at a rapid rate and continues to have a wide array of effects on everything from temperature to plant life Beyond the negative environmental impacts climate change

is also proving to be a detriment to society with increasingly violent natural disasters and human health effects. It is essential to stay up to date on the latest in emerging research within this field as it continues to develop. The Research Anthology on Environmental and Societal Impacts of Climate Change discusses the varied effects of climate change throughout all areas of life and provides a comprehensive dive into the latest research on key elements of society that are affected by the rapidly increasing climate. Covering a range of topics including reproduction, plants and animals, and energy demand, it is ideal for environmentalists, policymakers, environmental engineers, scientists, disaster and crisis management personnel, professionals, government officials, practitioners, upper level students, and academics interested in emerging research on the numerous impacts of climate change. [Assessing the Antarctic Environment from a Climate Change Perspective](#) Neloy

Khare, 2022-01-01 The present book covers diversified contributions addressing the impact of climate change on the Antarctic environment. It covers the reconstruction of environmental changes using different proxies. The chapters focus on the glacial history, glacial geomorphology, sedimentology, and geochemistry of the Antarctic region. Furthermore, the Cenozoic evolution of the Antarctic ice sheet is discussed along with a Scientometrics analysis of climate change research. The book serves as a useful reference for researchers who are fascinated by the polar region and environmental research. *Climate Change and Cities* Cynthia Rosenzweig, William D. Solecki, Stephen A. Hammer, Shagun Mehrotra, 2011-04-28 Urban areas are home to over half the world's people and are at the forefront of the climate change issue. The need for a global research effort to establish the current understanding of climate change adaptation and mitigation at the city level is urgent. To meet this goal, a coalition of international researchers, the Urban Climate Change Research Network (UCCRN), was formed at the time of the C40 Large Cities Climate Summit in New York in 2007. This book is the First UCCRN Assessment Report on Climate Change and Cities. The authors are all international experts from a diverse range of cities with varying socio-economic conditions from both the developing and developed world. It is invaluable for mayors, city officials, and policymakers, urban sustainability officers, and urban planners and researchers, professors, and advanced students. *Climate Change and Tourism in the Asia Pacific* Bruce Prideaux, Bob McKercher, Karen McNamara, 2015-09-07 Climate change will exert an enormous impact on all societies in the medium to long term. Tourism, as both a commercial activity and social phenomenon, is not immune. To date, industry has been slow to recognise the scale of the threat posed by a changing climate on its operations, and consumers have been extremely reluctant to modify their travel behaviours. The Asia Pacific region is well on the way to being the 21st Century powerhouse of tourism; however, the manner in which it develops will in part be determined by how the global community responds to climate change. This book examines climate change issues related to tourism in the Asia Pacific region. Chapters discuss demand and supply side issues, explore government policy responses, and introduce several new adaptation models. The book also calls for a more effective linking of social science research with the scientific discourse to create long-term resolution of and adaptation to this issue. This book was published as a special issue of Asia Pacific

Working Group II.,2007 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provide the most comprehensive and balanced assessment of climate change available This IPCC Working Group II volume provides a completely up to date scientific assessment of the impacts of climate change the vulnerability of natural and human environments and the potential for response through adaptation Written by the world s leading experts the IPCC volumes will again prove to be invaluable for researchers students and policymakers and will form the standard reference works for policy decisions for government and industry worldwide
