A book previously published within the framework of the Ecological Studies Series entitled Physical Aspects of Soil Water and Salts in Ecosystems included a wide spectrum of research papers devoted to new findings in the field of soil plant water relationships. *Arid Zone Irrigation* has been written specifically as a textbook for agronomists, soil scientists, agrometeorologists, water engineers and plant physiologists who want a clear presentation of irrigation fundamentals in arid and semi arid zones. It was our intention to provide an understanding of the basic principles governing irrigation technology and to help overcome the problem of water shortage in arid zone agriculture. This book written by a large number of specialists and covering a broad spectrum of different disciplines is based on general up to date information as well as on the results of the authors own research. The idea of preparing such a textbook was conceived during a series of international advanced courses on irrigation held annually at the Institute of Soils and Water Agricultural Research Organization Volcani Center Bet Dagan Israel. The final organization of the material has been influenced by discussions with colleagues from Sweden and Holland and the participants in our summer courses. Grateful acknowledgements are due to Professor CALVIN C ROSE CSIRO Canberra Australia Professor DALE SWARTZEN DRUBER Purdue University Lafayette U S A and Dr SHLOMO P NEUMAN Agricultural Research Organization Bet Dagan Israel for their many helpful suggestions during critical reading of the manuscript.
