

1 INTRODUCTION

1.1 GENERAL

The branch of Geophysics, which deals with the occurrence and movement of water in terms of quantities and quality on and below the surface of the earth except the oceans, in vapour, liquid or solid state, is termed Hydrology. For hydrological design and water resources assessment purposes proper estimates of river flow and river stages are required. Their measurement is the domain of hydrometry.

Figure 1.1:
Hydrometric station.

The measurement of river stages and discharges at the observation stations is dealt with in this Volume 4 "Hydrometry" of the "Manual on Hydrological Field Measurements and Data Processing". This volume on hydrometry includes **how** measurements are made, **with what** equipment, **where** and **when**. Volume 4 consists of three parts:

1. Design Manual, in which the basic principles and procedures are put in context
2. Reference Manual, for details on specific topics, and
3. Field Manual, dealing with operational procedures at the observation station.

This part of Volume 4 covers the Design Manual: 'Hydrometry'. It is set up as follows:

- Chapter 1 deals with definition of quantities and units and unit conversions.
- Some basic hydraulic principles as far as relevant for hydrometry are dealt with in Chapter 2.
- In Chapter 3 the design and optimisation of hydrometric networks are discussed. Network densities are related to measurement objectives, spatial variation of the phenomena and cost of installation and operation.
