Dominik Slezak, Yanchun Zhang, 2009-11-24 As future generation information technology FGIT becomes specialized and fragmented it is easy to lose sight that many topics in FGIT have common threads and because of this advances in one discipline may be transmitted to others Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts Through such hybrid philosophy a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions It included the following international conferences Advanced Software Engineering and Its Applications ASEA Bio Science and Bio Technology BSBT Control and Automation CA Database Theory and Application DTA Disaster Recovery and Business Continuity DRBC published independently Future Generation Communication and Networking FGCN that was combined with Advanced Communication and Networking ACN Grid and Distributed Computing GDC Multimedia Computer Graphics and Broadcasting MulGraB Security Technology SecTech Signal Processing Image Processing and Pattern Recognition SIP and e Service Science and Technology UNESST **Learn UML in 24 Hours** Alex

**Theory and Engineering of Complex Systems and Dependability** Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2015-06-14 Building upon a long tradition of scientific conferences dealing with problems of reliability in technical systems in 2006 Department of Computer Engineering at Wrocław University of Technology established DepCoS RELCOMEX series of events in order to promote a comprehensive approach to evaluation of system performability which is now commonly called dependability Contemporary complex systems integrate variety of technical information software and human users administrators and management resources Their complexity comes not only from involved technical and organizational structures but mainly from complexity of information processes that must be implemented in specific operational environment data processing monitoring management etc In such a case

traditional methods of reliability evaluation focused mainly on technical levels are insufficient and more innovative multidisciplinary methods of dependability analysis must be applied Selection of submissions for these proceedings exemplify diversity of topics that must be included in such analyses tools methodologies and standards for modelling design and simulation of the systems security and confidentiality in information processing specific issues of heterogeneous today often wireless computer networks or management of transportation networks In addition this edition of the conference hosted the 5th CrISS DESSERT Workshop devoted to the problems of security and safety in critical information systems *On the Move to Meaningful Internet Systems: OTM 2016 Workshops* Ioana Ciuciu, Christophe Debruyne, Hervé Panetto, Georg Weichhart, Peter Bollen, Anna Fensel, Maria-Esther Vidal, 2017-03-27 This volume constitutes the refereed proceedings of the Confederated International International Workshop on Enterprise Integration Interoperability and Networking EI2N Fact Based Modeling FBM Industry Case Studies Program ICSP International Workshop on Methods Evaluation Tools and Applications for the Creation and Consumption of Structured Data for the e Society Meta4eS and OnTheMove Academy OTMA 2016 held as part of OTM 2016 in October 2016 in Rhodes Greece The 27 full papers presented together with 8 short papers were carefully reviewed and selected from 58 submissions The OTM program every year covers data and Web semantics distributed objects Web services databases information systems enterprise workflow and collaboration ubiquity interoperability mobility grid and high performance computing Enterprise Information Systems Engineering Monique Snoeck, 2014-09-20 The increasing penetration of IT in organizations calls for an integrative perspective on enterprises and their supporting information systems MERODE offers an intuitive and practical approach to enterprise modelling and using these models as core for building enterprise information systems From a business analyst perspective benefits of the approach are its simplicity and the possibility to evaluate the consequences of modeling choices through fast prototyping without requiring any technical experience The focus on domain modelling ensures the development of a common language for talking about essential business concepts and of a shared understanding of business rules On the construction side experienced benefits of the approach are a clear separation between specification and implementation more generic and future proof systems and an improved insight in the cost of changes A first distinguishing feature is the method s grounding in process algebra provides clear criteria and practical support for model quality Second the use of the concept of business events provides a deep integration between structural and behavioral aspects The clear and intuitive semantics easily extend to application integration COTS software and Web Services Students and practitioners are the book s main target audience as both groups will benefit from its practical advice on how to create complete models which combine structural and behavioral views of a system to be and which can readily be transformed into code and on how to evaluate the quality of those models In addition researchers in the area of conceptual or enterprise modelling will find a concise overview of the main findings related to the MERODE project The work is complemented by a wealth of extra material on the author s web

page at KU Leuven including a free CASE tool with code generator a collection of cases with solutions and a set of domain modelling patterns that have been developed on the basis of the methods use in industry and government *Eclipse Modeling Framework* Frank Budinsky,2004 bull Shows how EMF unifies three important technologies Java XML and UML bull Provides a comprehensive overview of the EMF classes including a complete quick reference for all the classes and methods in the EMF 1.1 API bull Includes examples of many common framework customizations and programming techniques
