*The Theory of Classical Dynamics* J. B. Griffiths, 1985 This textbook describes in detail the classical theory of dynamics a subject fundamental to the physical sciences which has a large number of important applications The author's aim is to describe the essential content of the theory the general way in which it is used and the basic concepts that are involved No deep understanding can be obtained simply by examining theoretical considerations so Dr Griffiths has included throughout many examples and exercises This then is an ideal textbook for an undergraduate course for physicists or mathematicians who are familiar with vector analysis

### **The Justificatory Force of Experiences** Philipp

Berghofer, 2022-03-24 This book offers a phenomenological conception of experiential justification that seeks to clarify why certain experiences are a source of immediate justification and what role experiences play in gaining scientific knowledge Based on the author's account of experiential justification this book exemplifies how a phenomenological experience first epistemology can epistemically ground the individual sciences More precisely it delivers a comprehensive picture of how we get from epistemology to the foundations of mathematics and physics The book is unique as it utilizes methods and insights from the phenomenological tradition in order to make progress in current analytic epistemology It serves as a starting point for re-evaluating the relevance of Husserlian phenomenology to current analytic epistemology and making an important step towards paving the way for future mutually beneficial discussions This is achieved by exemplifying how current debates can benefit from ideas insights and methods we find in the phenomenological tradition **American Journal of Physics**, 2005
