Original Author: Roger, Location: Greater Frankfurt am Main ▽ Posted on: 09-09-2004
Original Title: **Eigendiagnose an der VW Climatronic von Hella**
Translation by: Nate (AKA VWaffe), 16-08-2008

Here are a few instructions on how to decipher useful information from the VW Climatronic control panel. Especially attractive is the fact that you do not need any sort of diagnosis equipment, and can read out one value or the other while stopped at a light, for example.

The description of reading error codes, performing the control surface test, and onboard-diagnosis is limited to the Hella control unit, as pictured below. This unit is found in the Golf IV *[ed: in Europe]* and in the Passat 3B/3BG. Externally identical control units from VDO were also used in some of the same cars, which have the same pinouts, but whose Self-diagnosis channels are assigned differently. User beware!

Reading the Internal Error Memory:

Ignition ON.

To activate the readout: Press and hold the „ECON“ and „Recirculate“ buttons simultaneously for about 2 seconds.

Any error codes present will now be displayed. To scroll to the next error code, press the „Warmer“ button. When all codes have been displayed, „000“ is displayed.

If there are no errors present, „444“ is displayed.

To clear the error codes: After the last code is displayed, (i.e. after „000“ is displayed), press and hold „ECON“ for at least 2 seconds. „444“ will be displayed as confirmation that there are no more codes present.

To exit the Internal Error Memory Mode: briefly press the „ECON“ button.
