- 1) Open the throttle valve fully and insert the needle valve approximately 3 turns from the fully closed position.
- 2) It is recommended to use the choke valve for priming, although you can prime the engine through the exhaust pipe if you wish.
- 3) Close the choke valve and turn the propeller counter-clockwise 20 times or less.
- 4) **CAUTION:** Do not turn the propeller more than 2 turns with force, as this may cause the engine to stop in a damaged fuel and exhaust system.
- 5) Turn the propeller counter-clockwise about 10 times and pull a small seed into the cylinder. When priming through the exhaust pipe, turn the propeller clockwise instead.
- 6) Connect the glowing to the battery and apply the electric starter.
- 7) When the engine starts, keep it running briefly with the electric starter valve setting. If the engine does not start, turn the needle valve clockwise 1/4 turn. Then disconnect the battery from the glowing and turn the needle valve slowly so that the engine starts. Adjust the needle valve gradually. For an all-around of the needle valve, turn the engine to stop, especially when it is new and it is difficult to start.
- 8) To restart the engine when it is hot, turn the propeller by hand to the choke valve while turning the propeller twice. Initially, the high compression inside the combustion chamber will turn the fuel into the air and start it through the exhaust pipe. Therefore, turn the propeller clockwise 10 times or twice until the cylinder becomes hot enough for the glowing to start. It is possible to prime through the exhaust pipe.
- 9) **CAUTION:** Do not connect the glowing to the battery when priming.

The above starting procedure is standard for the FS-90. However, the engine may be safely hand-started except when using a rather lightweight wooden propeller.
