Recent Advances in Pharmaceutical Analysis: Applications and New Challenges for the Quality of Medicines Federica Aureli, Anna Borioni, Maria-Elisa Crestoni, Birgit Hakkarainen, Constantinos K. Zacharis, 2025-11-18 Analytical chemistry in pharmaceutical analysis deals with the investigation of bulk drug materials active pharmaceutical ingredients intermediates drug products including their impurities and degradation products to address the different qualitative and quantitative descriptors of medicines This task falls in the overarching concept of quality which is crucial to ensure that safe and effective drugs are released to the market Analytical chemistry plays a fundamental role in supporting the thorough characterization of medicines used in the toxicological clinical studies and in the market The recent outbreak of nitrosamines impurities highlighted the challenges of measuring minute concentrations at low detection limits in complex matrices Recently several approaches have been developed to address the multifaceted features of the quality of medicines as structural analysis content impurity profile including stereochemical impurities suitability of the container closure systems and degradation patterns However new challenges continue to emerge and a number knowledge gaps are still at the forefront of the scientific and regulatory community The analytical needs are multifaceted In pharmaceutical research the characterization and monitoring of impurities including polymorphic forms stereoisomers are in focus of the quality domain being the latter difficult to address due to structural similarities with the active substance Furthermore the control of small amounts of potentially toxic impurities in finished products is often challenging and requires specific and sensitive analytical methods The application of nanotechnologies in drug development may require complementary techniques to address nanospecific issues On the regulatory side the annual marketing surveillance programmes for human and veterinary medicines entail high throughput techniques to screen the ever increasing number of samples with variable compositions The substandard production and falsification of human and veterinary medicines are still on the increase therefore fast and reliable screening tools for the unambiguous identification and quantitation of declared or undeclared active substances are necessary In all cases untargeted analytical approaches could show unexpected impurities at undue level Therefore advances in hyphenated techniques such as gas GC and liquid LC chromatography coupled to mass spectrometry MS nuclear magnetic resonance NMR Fourier transform infrared FTIR Inductively Coupled Mass Spectrometry ICP MS Raman spectroscopy to name the most common are promising areas of research The goal of this Research Topic is to explore major breakthroughs and novel applications of analytical chemistry to address new challenges and recent advances in pharmaceutical analysis Different analytical methodologies encompassing innovative and suitable chemical approaches will be gathered to support optimized sample preparation protocols detection quantification data processing and statistical analysis Special attention will be paid to inorganic and organic mass spectrometry spectroscopy e.g. NMR IR Raman and chromatography in order to build knowledge on chemical medicines peptides polysaccharides and herbal products The proposed research will have the potential to be

recognized as a scientific benchmark for assessing the quality of medicines This Research Topic collection will cover chromatographic fractionation spectroscopic spectrometric omic sciences elemental analysis multivariate statistical and chemometric tools applied in the analysis of pharmaceuticals Quantitative and qualitative analyses that include sample preparation analytical instrumentation and data processing will also be considered Lastly applications to case studies and market surveillance studies are in the scope of the topic collection Biological methods are out of scope for this Research Topic We welcome Original Research Review Mini Review and Perspective articles on themes including but not limited to Spectroscopy and Spectrometry techniques for the quantitative and qualitative characterization of active pharmaceutical ingredients and medicinal products Sample preparation Surveillance studies encompassing newly developed analytical methods Falsification of medicines Detection and quantification of chemical impurities organic stereochemical and elemental Chemical characterization of nanomedicines

Non-invasive and Non-destructive Methods for Food Integrity Ana María Jiménez-Carvelo, Alejandra Arroyo-Cerezo, Luis Cuadros-Rodríguez, 2024-12-16 There is an increasing need for the food industry to provide information to ensure quality requirements and prevent the food fraud applying in situ and on line technologies for full process control along the food chain In today s information age consumers want to be able to have as much information as possible about products quickly and efficiently Therefore the rapid detection of indicators that determine food quality and safety risks helps to ensure an effective and comprehensive food sovereignty system For this purpose the most powerful and commonly used analytical techniques are liquid or gas chromatography both coupled to different detection systems The use of these analytical techniques involves long analysis times and prior procedures of fitness for measuring such as sample pre treatment in which the use of reagents and chemical solvents that may be hazardous or harmful to the environment is common These facts highlight the need for the development of new analytical methods that

offer the possibility of rapid non invasive on site environmentally friendly analyses that can be carried out along the entire production chain In addition recent technological developments and advances in data mining and machine learning offer the opportunity to introduce changes that could transform the role of food integrity Non invasive and Non destructive Methods for Food Integrity is dedicated to describing the fundamentals and applications of existing analytical technologies and the current state of these techniques at industrial level The text utilizes reported studies and applications differentiating by particular food and beverage groups in order to provide a comprehensive and detailed overview of the current state of the art of non invasive non destructive analytical techniques for food quality and integrity For each technique covered an introduction is included and the chemical information obtained and why this technology is useful for food analysis Information on the instrumentation available for the application of each technique in food is also provided as well as information on data processing with reference to the treatment of the signal obtained and the use of chemometrics Applications published in scientific literature are detailed for different categories of similar foods based on the techniques that are already used for the routine control of food integrity This book provides guidance for potential users in the food industries and quality control laboratories for choosing which technology to implement based on the type of product and the results to be obtained
