**Hardware/Software Co-Design** Giovanni De Micheli, Rolf Ernst, Wayne Wolf, 2001-06-19 Embedded system designers are constantly looking for new tools and techniques to help satisfy the exploding demand for consumer information appliances and specialized industrial products. One critical barrier to the timely release of embedded system products is integrating the design of the hardware and software systems. Hardware software co design is a set of methodologies and techniques specifically created to support the concurrent design of both systems, effectively reducing multiple iterations and major redesigns. In addition to its critical role in the development of embedded systems, many experts believe that co design will be a key design methodology for Systems on a Chip. *Readings in Hardware Software Co Design* presents the papers that have shaped the hardware software co design field since its inception in the early 90s. Field experts Giovanni De Micheli, Rolf Ernst, and Wayne Wolf introduce sections of the book and provide context for the paper that follows. This collection provides professionals, researchers, and graduate students with a single reference source for this critical aspect of computing design.
