

The Circulatory System

(How are materials moved by the circulatory system?)

Why?

Blood is a living, liquid tissue made up of many components. The heart is the pump that forces the blood throughout the body, delivering nutrients and oxygen to all parts of the body. If a drop of blood were traced through the body, it would travel through both the left and right side of the heart on one complete journey through the body.

Model 1: Oxygen Content in Blood during Circulation

- Percentages are used for comparative purposes only.

- What structure does the large rectangle represent?
heart
- What do the arrows in the model represent?
oxygen level
- Does the % oxygen stay constant throughout the circulation of the blood?
yes until it becomes oxygenate
- Between leaving the right side of the heart and arriving back at the left side of the heart what has happened to the amount of oxygen in the blood?
it increased
- Between leaving the left side of the heart and arriving back at the right side of the heart what has happened to the amount of oxygen in the blood?
it decreased
