For example, efforts have been made to implement an individualized system of monitoring and controlling the environment in the home. This has been done by installing air conditioning units, air purifiers, and other devices that can help to control the indoor environment. The results of these efforts have been mixed, with some studies showing that air conditioning can help to reduce the risk of asthma and other respiratory problems, while others have found that air conditioning can also increase the risk of these problems. This suggests that more research is needed to understand the role of the indoor environment in the development of asthma and other respiratory problems.
