and the promise of nearly unlimited potential. At the same time, however, the arrival of these sophisticated aircraft created an unprecedented training and operational challenge never experienced in GA. The Pilot's Manual Access to Flight has been specifically crafted to meet this challenge, making use of methods that will allow pilots to obtain the maximum safety and utility from their aircraft. For the first time ever, private pilot and instrument rating curriculums are integrated so pilots flying TAA learn to intrinsically manage the combined skills of aircraft control, task management, systems management, and the complex flight environment of today's busy airspace. This is a very different approach from the practice of traditional maneuver-based flight training used heretofore. With a realization of the inadequacy of maneuver-based training as applied to TAA, The Pilot's Manual Access to Flight embodies the state-of-the-art industry training standards of scenario-based training, SBT, learner-centered grading and involvement, and single pilot resource management (SRM). These are real-world skills taught with a train-like-you-fly philosophy, treating each and every lesson as a real flight. This is where harnessing the power of all available resources and aeronautical decision-making (ADM) become second nature. Whereas maneuver-based training focused specifically on simply learning to control the aircraft, this new methodology involves considering an entire flight and all its component aspects from beginning to end.
