Adaptation of Plants to Waterlogging and Hypoxia Najeeb Ullah,Silvia Pampana,Waqar Ahmad ,Daniel Kean Yuen Tan,2024-06-03 Plants like other living organisms require oxygen and water supplies for sustaining their normal growth and development The water requirement is generally met through a coordinated system of root to shoot communication However excessive soil moisture in the rhizosphere can impact normal functioning of plants by restricting oxygen supplies to the roots To survive under hypoxic conditions plants show cellular molecular and functional level adaptations One temporary response

could be switching to anaerobic respiration and maintain energy production to some extent via glycolysis and ethanol fermentation. However, root respiration, water and nutrient uptake, and hormonal synthesis are severely impacted under sustained periods of oxygen deficiency. These belowground changes in turn affect shoot performance and yield formation by interfering with the key physiological processes. **The Annalist**, 1923 *Directory of Louisiana Manufacturers*, 1993
