Artificial Intelligence, Society 5.0 and Smart City

Adaptation Initiatives for Businesses: An Integrated Approach Inês A.M. Gil, Fernando A.F. Ferreira, Neuza C.M.Q.F. Ferreira, Florentin Smarandache, Momtaj Khanam, Tugrul Daim, The unprecedented migration of populations to urban areas has created major challenges for municipalities and service providers. To address these issues, decision makers must embrace smart city and Society 5.0 paradigms, both of which focus on adaptability and sustainable development. Artificial intelligence (AI) plays a pivotal role by expanding service capacity, enabling automation, and processing vast data to align urban

development with the UN's Sustainable Development Goals (SDGs). This paper develops a multi-criteria analysis system designed to support decision making in complex socio-technological contexts. Using cognitive mapping and the Decision Making Trial and Evaluation Laboratory (DEMATEL) technique within a neutrosophic environment, the study analyzes cause and effect relationships among critical factors that influence businesses' adaptation to AI smart cities and Society 5.0. The results offer a holistic decision support framework to guide policymakers, businesses, and urban planners toward inclusive, sustainable, and technologically integrated societies.
