
Network Cisco Chapter 1

Topology - correct answer Manner in which data is exchanged over the network

Bus Topology - correct answer Nodes of the network are individually linked up to successive other nodes or another node and a terminator.

Weaknesses:

- Archaic topology
- Difficulty troubleshooting network issues
- Redundancy issue (one node fails = network fails)
- Need for terminators
- Amount of traffic created

Ring Topology - correct answer Circular network in which each and every node is linked to two other nodes.

Weaknesses:

- Troubleshooting difficulty
- Redundancy issues
- Amount of traffic created
- Difficult to add node to token ring network

Star Topology - correct answer Each node monitors an individual connection to a switch, where all other nodes are connected. Traffic between two known nodes only goes through switch and not other nodes.

- Increases redundancy of the network
- Data privacy

Weaknesses:

- Reliance of a switch
- Amount of wiring necessary

Mesh / "Ad Hoc" - correct answer Every node connected to every other node; usually occurs only in wireless modes in 'ad hoc' mode.

Weaknesses:

- Inefficient
- Large amount of overhead
- Difficult to manage

Decentralized Network (peer to peer) - correct answer Does not contain any distinctions between clients and server. Every node acts as a client and/or server depending on the task.

Ex. File sharing because nodes both download and upload files.
