

POURQUOI LE CLIMAT SE RÉCHAUFFE ?

C'est quoi, le climat ?

C'est le temps qu'il fait pendant une très longue période sur l'ensemble de la Terre. Le climat a beaucoup **changé** au cours de l'histoire de notre planète. Mais ses évolutions ont toujours pris **des millions d'années**.

Quel est le problème ?

Depuis 150 ans, le climat s'est mis à **changer anormalement vite**. L'activité humaine produit trop de **gaz à effet de serre** (les GES) qui **réchauffent** anormalement la température et **perturbent** le climat.

Champions de la pollution

Les deux principaux gaz à effet de serre sont le **CO₂** et le **méthane**.

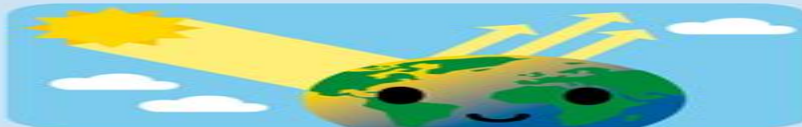

CO₂

méthane

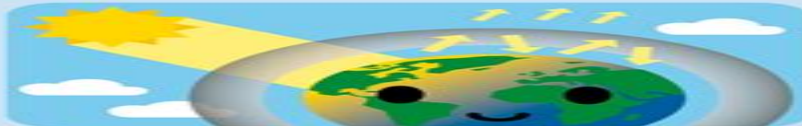

Observe ton propre corps. Lorsque ta température est **supérieure à la normale** (37°C) d'à peine 1 ou 2 degrés, tu te sens faible, la tête te tourne, ton pouls s'accélère. **C'est le signe que quelque chose ne va pas**. Pour la planète, c'est exactement la même chose.

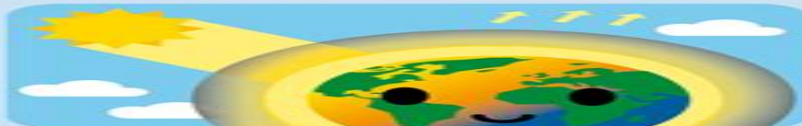

L'effet de serre : comment ça marche ?

1 Le Soleil envoie son énergie sur la Terre. Une partie **des rayons** qui arrivent au sol sont renvoyés vers l'atmosphère.

2 Une partie des rayons sont **bloqués** par une « **ceinture** » de gaz qui fait le tour de la Terre. Ces gaz sont **naturellement présents** dans l'atmosphère : les gaz à effet de serre.

3 Cette couche de gaz **conserve la chaleur**, comme le fait la vitre d'une serre de jardinier. Grâce à cette barrière naturelle, il fait chaud sur la Terre et la vie peut s'y développer.

4 Les hommes produisent des tonnes de gaz à effet de serre qui s'ajoutent à ceux **naturellement présents** autour de la Terre. Résultat : la couche de gaz devient plus épaisse. Elle **retient davantage de chaleur** qu'à l'état naturel : le climat se réchauffe.

Le changement climatique

Jacques, Guy, Le Treut, Hervé, 2004-06-22 Il n'est guère de jours où le climat ne fasse la une d'un média. Pour certains journalistes ou scientifiques le changement climatique est l'œuvre de l'homme, en est responsable. Pour d'autres, il s'amorce, l'homme n'y est pour rien. Nous présenterons les éléments scientifiques de ce dossier mais aussi la manière dont ils ont conduit ce débat de société. Comme la plupart des climatologues, nous montrerons que les activités humaines accentuent les concentrations des gaz à effet de serre, entraînant une inéluctable élévation de la température moyenne du globe qui modifiera les climats. Par un langage simple grâce à une perspective historique et la prise en considération des aspects humains, le changement climatique explique et démystifie le climat et son évolution actuelle. Avant de découvrir le contexte du changement climatique actuel, nous prendrons de la hauteur en nous penchant sur les rapports entre l'homme et le climat dans différentes cultures. Puis le lecteur se familiarisera avec le fonctionnement de la machine climatique, exercice indispensable pour comprendre les éléments susceptibles de la modifier. Les changements climatiques qu'a connus le Sahara entraîneront alors le lecteur dans une saga débutant il y a des centaines de millions d'années pour s'achever demain. Le thème du chapitre suivant qui évoquera les scénarios d'évolution les plus probables. L'étude des polémiques autour du changement climatique nous conduira à décrire les enjeux du protocole de Kyoto de 1997 dans ses aspects scientifiques, économiques et politiques intimement liés.

Les études de la Documentation française, 2004 **Risques naturels et développement en Afrique de l'Est (Région de l'IGAD)** Bouh Omar Ali, 2021-05-12 Les pays de la Corne de l'Afrique sont particulièrement concernés par les catastrophes naturelles qui sont l'origine d'importants dégâts humains et économiques. Parallèlement, ils figurent parmi les plus pauvres de la planète. Le lien entre niveau de richesse et catastrophes naturelles a toutefois été étudié dans cette partie du continent, une lacune que tente de combler cet ouvrage en proposant des méthodes et outils d'analyse pour valuer les causes des catastrophes naturelles et avancer des pistes de remédiation. Climate Change Digest, 1994 Rapport Du Colloque Canada-Union Européenne Canadian Polar Commission, Canada. Foreign Affairs Canada, 2004 **Climate Change and Climate Variability in Atlantic Canada** Canada. Environment Canada, 1997 This report summarizes the most recent literature describing the impacts of current climate and the potential effects of anticipated climate change on the environment and on those social and economic sectors in Atlantic Canada most likely to undergo significant changes. Chapter 1 describes the physical, historical, cultural and socio-economic resources of the region. Chapter 2 details current climatic conditions in Atlantic Canada including variability and recent trends. Chapter 3 reviews the impacts of the current climate on the following: fisheries and plankton, the coastal zone ecosystem, science and water resources, agriculture, forestry and the economy. Chapter 4 outlines measures that could be undertaken to adapt to climate change in the fishery, the coastal zone, agriculture and forestry. The final chapter summarizes knowledge gaps and research priorities in such areas as climatological monitoring and modelling climate change impacts and socio-economic issues.
