

Biology Chapter 4 Book Notes

Section 1

- Nucleic acids are polymers, just as proteins are polymers
 - But instead of being assembled from amino acids, **nucleic acids** are made up of monomers called **nucleotides**.
- 3 components of a nucleotide:
 - Phosphate group
 - 5-carbon sugar
 - Nitrogen-containing base
 - The phosphate group is bonded to the sugar molecule, which is bonded to the base.
- The sugar is the central component of the nucleotide
 - The five carbons in this sugar are labelled w/ numbers and prime symbols (') to provide a frame of reference
 - (1') the base is attached to the 1' carbon and the phosphate group is attached to the 5' carbon.
- Ribonucleotides are monomers of ribonucleic acid (RNA) and deoxyribonucleotides are the monomers of deoxyribonucleic acid (DNA)
 - Sugars: Ribose in ribonucleotides, deoxyribose in deoxyribonucleotides.
 - Deoxy- lacking in oxygen
- Ribonucleotides and deoxyribonucleotides also differ in one of their nitrogenous bases
 - These bases belong to structural groups called **purines** and **pyrimidines**.
 - Purines: adenine (A) and guanine (G)
 - Pyrimidines: cytosine (C), uracil (U), and thymine (T).
 - Ribonucleotides use uracil (U), while deoxyribonucleotides use thymine (T).
- Based on data from Stanley Miller and researchers who followed ([Chapter 23](#)), most biologists accept the idea that amino acids could have been synthesized early in Earth's history
 - Miller-like laboratory simulations have shown that nitrogenous bases and many different types of sugars, including ribose, can be synthesized readily under conditions that mimic the prebiotic soup.
 - What they found was striking—the minerals preferentially bound to ribose, effectively enriching and concentrating ribose on their surface from a pool of diverse sugars.
- Nucleotides polymerize via condensation reactions between the hydroxyl on the sugar component of one nucleotide and the phosphate group of another nucleotide
 - This reaction forms a new covalent bond between the nucleotides, and a molecule of water is released.
 - It's called a **phosphodiester linkage**, or a phosphodiester bond.

Chapter 7 Bio Packet Answers
