Chapter 8 Understanding Populations Concept Population:

Methods in Comparative Plant Population Ecology David J. Gibson, 2015 A user friendly introduction to the methodology of plant population ecology research *The Population Ecology of Interest Representation* Virginia Gray, David Lowery, 1996 This examination of lobbying communities explores how interest group populations are constructed and how they influence politics and public policy By examining how populations of interest groups are comprised this work fills an important gap between existing theories of the origins of individual interest groups and studies of interest group influence The population ecology model of interest communities developed here builds on insights first developed in population biology and later employed by organizational ecologists The model's central premise is that it is the environmental forces confronting interest organizations that most directly shape the contours of interest populations After examining the demography of interest organizations in the fifty American states the population ecology model is used to account for variations in the density and diversity of their interest communities the nature of competition among similar interest organizations to establish viable niches and the impact of alternative configurations of interest communities on the legislative process and the policies it produces These empirical findings suggest that the environment of interest communities is highly constraining limiting their size composition and potential impact on politics Virginia Gray is Professor of Political Science University of Minnesota David Lowery is Burton Craige Professor of Political Science University of North Carolina at Chapel Hill

Environmental Science , Population, Mobility and Belonging Rob Cover, 2019-10-08 In a world of increasing mobility and migration population size and composition come under persistent scrutiny across public policy public debate and film and television Drawing on media cultural and social theory approaches this book takes a fresh look at the concept of population as a term that circulates outside the traditional disciplinary areas of demography governance and statistics a term that gives coherence to notions such as community nation the world and global humanity itself It focuses on understanding how the concept of population governs ways of thinking about our own identities and forms of belonging at local national and international levels on the manner in which television genres fixate on depictions of overpopulation and underpopulation on the emergence of questions of ethics of belonging and migration in relation to cities on attitudes towards otherness and on the use by an emergent alt right politics of population in forgotten people concepts As such it will appeal to scholars of sociology geography and media and cultural studies with interests in questions of belonging citizenship and population
