Cooper, Lawrence M. Seiford, Joe Zhu, 2006-04-11 Data Envelopment Analysis DEA is a relatively new data oriented approach for evaluating the performances of a set of entities called Decision Making Units DMUs which convert multiple inputs into multiple outputs DEA has been used in evaluating the performances of many different kinds of entities engaged in many different kinds of activities in many different contexts It has opened up possibilities for use in cases which have been resistant to other approaches because of the complex and often unknown nature of the relations between the multiple inputs and outputs involved in many of these activities which are often reported in non commensurable units DEA has also been used to supply new insights into activities and entities that have previously been evaluated by other methods This handbook is intended to represent a milestone in the progression of DEA Written by experts who are often major contributors to the topics to be covered it includes a comprehensive review and discussion of basic DEA models extensions to the basic DEA methods and a collection of DEA applications in the areas of banking education sports retail health care and a review of current DEA software technology This handbook's chapters are organized into three categories i basic DEA models concepts and their extensions ii DEA applications and iii xii Preface DEA software packages The first category consists of eleven chapters **Data Envelopment Analysis** William W. Cooper, Lawrence M. Seiford, Kaoru Tone, 2007-01-10 Data Envelopment Analysis A Comprehensive Text with Models Applications References And DEA Solver Software 2nd Edition is designed to provide a systematic introduction to DEA and its uses as a multifaceted tool for

evaluating problems in a variety of contexts Each chapter accompanies its developments with simple numerical examples and discussions of actual applications Emphasis is placed on the use as well as an understanding of DEA and the topics in this book have been selected and treated accordingly The first nine chapters cover the basic principles of DEA and the final seven chapters are more advanced treatment of DEA These final chapters were completely revised into new chapters reflecting recent developments that greatly extend the power and scope of DEA and lead to new directions for research and DEA uses Together with the first ten chapters of the basic principles they will provide students and researchers with a solid understanding of the methodology its uses and its potential

Environmental Assessment on Energy and Sustainability by Data Envelopment Analysis Toshiyuki Sueyoshi, Mika Goto, 2018-03-19 Introduces a bold new model for energy industry pollution prevention and sustainable growth Balancing industrial pollution prevention with economic growth is one of the knottiest problems faced by industry today This book introduces a novel approach to using data envelopment analysis DEA as a powerful tool for achieving that balance in the energy industries the world s largest producers of greenhouse gases It describes a rigorous framework that integrates elements of the social sciences corporate strategy regional economics energy economics and environmental policy and delivers a methodology and a set of strategies for promoting green innovation while solving key managerial challenges to greenhouse gas reduction and business growth In writing this book the authors have drawn upon their pioneering work and considerable experience in the field to develop an unconventional holistic approach to using DEA to assess key aspects of sustainability development The book is divided into two sections the first of which lays out a conventional framework of DEA as the basis for new research directions In the second section the authors delve into conceptual and methodological extensions of conventional DEA for solving problems of environmental assessment in all contemporary energy industry sectors Introduces a powerful new approach to using DEA to achieve pollution prevention sustainability and business growth Covers the fundamentals of DEA including theory statistical models and practical issues of conventional applications of DEA Explores new statistical modeling strategies and explores their economic and business implications Examines applications of DEA to environmental analysis across the complete range of energy industries including coal petroleum shale gas nuclear energy renewables and more Summarizes important studies and nearly 800 peer reviewed articles on energy the environment and sustainability Environmental Assessment on Energy and Sustainability by Data Envelopment Analysis is must reading for researchers academics graduate students and practitioners in the energy industries as well as government officials and policymakers tasked with regulating the environmental impacts of industrial pollution

Data Envelopment Analysis (DEA) as an Approach to Exploring Technical Efficiency in Higher Education Yingquan Song, 2005

Performance Benchmarking in Public Transport Sector. The Data Envelopment Analysis (DEA) method Andreas Davidek, 2017-11-28 Seminar paper from the year 2015 in the subject Business economics Controlling grade 1 3 course Performance Benchmarking and Operations Research language English

abstract The non parametric approach is a common method for measuring the relative efficiency in the area of performance benchmarking and operations research This approach does not require the a priori specification of a function The estimation of the frontier of the production set only requires that the production set satisfies some properties such as input and output factors The Data Envelopment Analysis DEA method is a non parametric approach that uses mathematical programming to estimate production frontiers and calculate efficiency scores The above technical explanation is necessary as the present seminar paper deals with the application of the DEA approach in the field of the public transport The objective of this paper is to review the state of the art in performance benchmarking in terms of different DEA based framework and criteria to measure efficiency in the environments of public transport To contribute to this goal the ambition is to provide a systematic analysis of the performance criteria of the DEA models Consequently the main focus of this paper is to examine and classify the performance criteria

Hospital efficiency analysis in England and Germany. What lessons can be learned from each other? Lucas Fandrey, 2016-03-09 Master's Thesis from the year 2015 in the subject Medicine Hospital Environment Clinical Medicine grade 80 University of Hertfordshire language English abstract This report analyses the efficiency of hospitals in England and Germany Data Envelopment Analysis DEA is utilised to estimate a best practice frontier and to evaluate the performance characteristics of different hospitals in the two countries The measurement categories of input factors are represented by the hospital size amount of beds number of wards number of employed medical specialists sum of total inpatient admissions demographic environment population density in population km² and one output factor mortality rates Regarding these factors the main findings reveal that the allocation of inefficient hospitals in England is broadly spread and therefore the mean efficiency value of hospitals in England is 44% whereas 100% describes efficient units In contrast the mean efficiency value of German hospitals equates to 91% Consequently the allocation of inefficient German hospitals is less spread and the overall performance of hospital health supply is more efficient in Germany compared to England Most remarkably the amount of inpatient admissions is one of the main drivers for efficiency and especially the English hospitals suffer from high numbers of inpatient admissions which may be reduced due to improvements in the primary healthcare supply provided by general practitioners

Data Envelopment Analysis: Theory, Methodology, and Applications Abraham Charnes, William W. Cooper, Arie Y. Lewin, Lawrence M. Seiford, 1995-07-31 This book represents a milestone in the progression of Data Envelopment Analysis DEA It is the first reference text which includes a comprehensive review and comparative discussion of the basic DEA models The development is anchored in a unified mathematical and graphical treatment and includes the most important modeling extensions In addition this is the first book that addresses the actual process of conducting DEA analyses including combining DEA and 1 parametric techniques The book has three other distinctive features It traces the applications driven evolution and diffusion of DEA models and extensions across disciplinary boundaries It includes a comprehensive bibliography to serve as a source of references as well as a platform for further

developments And finally the power of DEA analysis is demonstrated through fifteen novel applications which should serve as an inspiration for future applications and extensions of the methodology The origin of this book was a Conference on New Uses of DEA in 2 Management and Public Policy which was held at the IC Institute of the University of Texas at Austin on September 27-29 1989 The conference was made possible through NSF Grant SES 8722504 A Charnes and 2 W W Cooper co-PIs and the support of the IC Institute *Use of Data Envelopment Analysis in Accounting Applications* Jean C. Bedard, 1985

Public Sector Efficiency Measurement Joseph Augustine Ganley, John Cubbin, 1992 The core problem tackled in this book is the measurement of public sector efficiency with Data Envelopment Analysis (DEA) The book is intended to inject new ideas into the diverse academic literature which up till now has lacked a critical book length exploration of DEA The text is readable and intuitive making it suitable for a broad audience including policy makers and civil servants working on the control of public expenditure privatisation etc Graduates and advanced undergraduates should also find this book a valuable introduction to the nature and implementation of DEA These will include students on economics management science and accounting degrees The book provides a realistic approach to DEA acknowledging its problems such as the fundamental output measurement and variable selection problems which are rarely recognised in applied studies *Extension of Data Envelopment Analysis with Preference Information* Tarja Joro, Pekka J. Korhonen, 2015-01-02 This book provides an introduction to incorporating preference information in Data Envelopment Analysis (DEA) with a special emphasis in Value Efficiency Analysis In addition to theoretical considerations numerous illustrative examples are included Hence the book can be used as a teaching text as well Only a modest mathematical background is needed to understand the main principles The only prerequisites are a familiarity with linear algebra especially matrix calculus b knowledge of the simplex method and c familiarity with the use of computer software The book is organized as follows Chapter 1 provides motivation and introduces the basic concepts Chapter 2 provides the basic ideas and models of Data Envelopment Analysis The efficient frontier and production possibility set concepts play an important role in all considerations That's why these concepts are considered more closely in Chapter 3 Since the approaches introduced in this study are inspired by Multiple Objective Linear Programming the basic concepts of this field are reviewed in Chapter 4 Chapter 5 also compares and contrasts Data Envelopment Analysis and Multiple Objective Linear Programming providing some cornerstones for approaches presented later in the book Chapter 6 discusses the traditional approaches to take into account preference information in DEA In Chapter 7 Value Efficiency is introduced and Chapter 8 discusses practical aspects Some extensions are presented in Chapter 9 and in Chapter 10 Value Efficiency is extended to cover the case when a production possibility set is not convex Three implemented applications are reviewed in Chapter 11 **Introduction to the Theory and Application of Data Envelopment Analysis** Emmanuel Thanassoulis, 2013-06-29 1 DATA ENVELOPMENT ANALYSIS Data Envelopment Analysis (DEA) was initially developed as a method for assessing the comparative efficiencies of organisational units such as the

branches of a bank schools hospital departments or restaurants The key in each case is that they perform feature which makes the units comparable the same function in terms of the kinds of resource they use and the types of output they produce For example all bank branches to be compared would typically use staff and capital assets to effect income generating activities such as advancing loans selling financial products and carrying out banking transactions on behalf of their clients The efficiencies assessed in this context by DEA are intended to reflect the scope for resource conservation at the unit being assessed without detriment to its outputs or alternatively the scope for output augmentation without additional resources The efficiencies assessed are comparative or relative because they reflect scope for resource conservation or output augmentation at one unit relative to other comparable benchmark units rather than in some absolute sense We resort to relative rather than absolute efficiencies because in most practical contexts we lack sufficient information to derive the superior measures of absolute efficiency DEA was initiated by Charnes Cooper and Rhodes in 1978 in their seminal paper Charnes et al 1978 The paper operationalised and extended by means of linear programming production economics concepts of empirical efficiency put forth some twenty years earlier by Farrell 1957 *The study on selection of green supply chain partners in USA logistics industry* Tai Nguyen Van, Ho Thi Hong Xuyen, 2015-09-30 Thesis M A from the year 2014 in the subject Business economics Supply Production Logistics grade 9 language English abstract The main purpose of this paper is to evaluation of performance measure for green supply chain partners in U S A logistics industry using Data development annalysis To conduct a valid and reliable evaluation process while applying the logistics companies case in U S A we integrated the slacks based measure of super efficiency super SBM and Malmquist index to directly handle the slacks explore best performer analyzed the inter temporal efficiency change which is decomposed into catch up and frontier shift effects and find influential factors in selecting green supply chain partners GSCPs criteria **Proceedings of IAC in Prague 2025** Group of Authors, 2025-12-13 International Academic Education Global Education Teaching and Learning IAC GETL Economics Business and Marketing IAC MEBM Engineering Transport IT and Artificial Intelligence IAC ETITAI **Service Organization Productivity Management** H.
