

Chapter 9: Application: International Trade

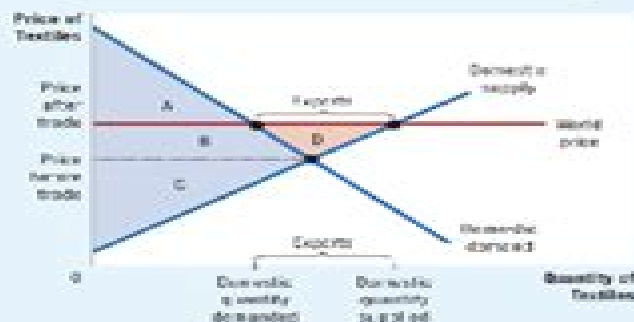

FIGURE 2

International Trade in an Exporting Country

Once trade is allowed, the domestic price rises to equal the world price. The supply curve shows the quantity of textiles produced domestically, and the demand curve shows the quantity consumed domestically. Exports from Iceland equal the difference between the domestic quantity supplied and the domestic quantity demanded at the world price. Sellers are better off (producer surplus rises from C to $B + C + D$), and buyers are worse off (consumer surplus falls from $A + B$ to A). Total surplus rises by an amount equal to area D , indicating that trade raises the economic well-being of the country as a whole.

	Before Trade	After Trade	Change
Consumer Surplus	$A + B$	A	$-B$
Producer Surplus	C	$B + C + D$	$+(B + D)$
Total Surplus	$A + B + C$	$A + B + C + D$	$+D$

The area D shows the increase in total surplus and represents the gains from trade.

- Exporting country
 - Before international trade
 - Consumer surplus
 - Producer surplus
 - With international trade
 - Smaller consumer surplus
 - Higher producer surplus

Higher total surplus

- Exporting country, with international trade
 - Domestic producers of the good are better off
 - Domestic consumers are worse off
 - Trade raises the economic well-being of a nation
 - Gains of the winners exceed the losses of the losers
- Importing country
 - Domestic equilibrium price before trade is above world price
 - Once trade is allowed
