Question 3:

We see green coloured plastic grass at many places these days. Space around natural grass feels cooler than space around the plastic grass. Can you find out why?

Answer 3:

Space around natural grass feels cooler because natural grass allows for the process of transpiration and evaporation, which absorbs heat and cools the surrounding air. Plastic grass does not have this property, so it does not provide the cooling effect that natural grass does.

Question 4:

Give examples of liquids other than water, which evaporate.

Answer 4:

Examples of liquids other than water that evaporate include alcohol, acetone, and petrol.

Question 5:

Fans move air around, creating a cooling sensation. It might seem strange to use a fan to dry wet clothes since fans usually make things cooler, not warmer. Normally, when water evaporates, it requires heat, not cold air. What do you think about this?
